1 Executive summary

This Development Servicing Plan (DSP) sets out the price for connecting a new development to a wastewater system in the West Camden DSP region. Additional charges may be payable depending on what services will be provided to a development, such as drinking water.

The price for new wastewater connections has been calculated using the method set by the Independent Pricing and Regulatory Tribunal's (IPART) in their 2018 Determination¹. Our approach to implementing the 2018 Determination is described in a separate methodology document², while this DSP describes inputs that are specific to this DSP area. The two documents should be read together to gain a full understanding of our approach.

The wastewater infrastructure contribution for the West Camden DSP area is \$4,795.50 (\$2022-23) per Equivalent Tenement³ (ET). On 19 October 2022, the NSW Treasurer issued an approval under section 18(2) of the *Independent Pricing and Regulatory Tribunal Act 1992*, authorising us to charge less than the maximum price calculated under the 2018 Determination until 30 June 2026. Table 1-1 sets out the maximum prices that will be levied on new developments for wastewater services in this DSP area from 1 July 2023 until the DSP is reviewed and replaced.

Table 1-1 – Wastewater infrastructure contribution prices for this DSP area (\$2022-23)

| | 1 July 2023 to 30 June 2024 | 1 July 2024 to 30 June 2025 | 1 July 2025 to 30 June 2026 | 1 July 2026 onward |
|---|-----------------------------------|-----------------------------------|-----------------------------------|-------------------------------|
| Maximum price calculated under the 2018 Determination (\$/ET) | \$4,795.50 | \$4,795.50 + CPI ₁ | \$4,795.50 + CPI ₂ | \$4,795.50 + CPI ₃ |
| Percentage of maximum price to be charged | 0% | 25% | 50% | 100% |
| Maximum price that can be levied on new development (\$/ET) | \$0 | \$1,198.88 + CPI ₁ | \$2,397.75 + CPI ₂ | \$4,795.50 + CPI ₃ |

Note: the price is also adjusted each financial year based on changes in the Consumer Price Index (CPI) compared to the March Quarter 2023.

¹ IPART (2018) *Maximum prices for connecting, or upgrading a connection, to a water supply, sewerage, or drainage system for metropolitan water agencies*

² Sydney Water (2023) *Infrastructure contributions: how we apply IPART's pricing method*

³ See section 2.3 for more information regarding ET's and an overview of how to apply this price to individual developments.

2 Introduction

2.1 Infrastructure contributions and Development Servicing Plans

The *Sydney Water Act 1994* allows Sydney Water to recover the investment of infrastructure needed to provide services to new properties.

IPART is an independent authority that regulates the pricing of declared government monopoly services. IPART may set a maximum price for a government monopoly service, or it may decide to set a methodology that must be used to calculate the price.

In their 2018 Determination, IPART set a methodology that must be used to determine the maximum price for a new development connecting to a water, wastewater or stormwater system. The IPART methodology generates a price payable by all development inside a discrete Development Servicing Plan (DSP) area. Contribution prices are calculated separately for water, wastewater and stormwater (and, under a separate determination, for recycled water).

2.2 Who pays the infrastructure contribution?

As a condition of development consent, a consent authority (usually Council) may require a proponent to make satisfactory arrangements for the provision of water-related services to a development. To identify and confirm the necessary arrangements, the proponent must submit to Sydney Water an application for a Section 73 Compliance Certificate.

Upon receiving an application, we will investigate the impact a proposed development is likely to have on our systems. We will then issue a Notice of Requirements (NoR) under s74 of the *Sydney Water Act*, setting out any conditions that must be met (eg, details of works that must be constructed so that services will be available to the development). Infrastructure contributions are payable for all developments that require a Section 73 Certificate and must be paid by the proponent of the development before the Certificate can be issued.

In many cases a development is for the subdivision of land into smaller lots that are later sold to others for purposes such as building a house. Infrastructure contributions are not levied on this subsequent development, unless the subsequent development also needs its own Section 73 Compliance Certificate (eg, because a single residential lot will be sub-divided to create a dual occupancy).

2.3 How do I apply the charge to my development?

The infrastructure contribution price is the amount that must be paid by one equivalent tenement (ET). IPART's 2018 determination defines one ET as being equal to the annual total demand of an average detached, single residential dwelling⁴.

The total infrastructure contribution payable by any given development would equal the base price in the DSP area multiplied the number of additional ETs. For example, if a single residential dwelling uses 200 kilolitres of water in a year, one ET equals 200 kilolitres. If we receive a section 73 application for a development and assess that it will use 1,000 kilolitres of water over a year, the development is for five ETs. Assuming a base price in the DSP area of \$5,000 per ET, the development would be required to pay \$25,000 (\$5,000 per ET x 5 ETs).

We work out the number of ETs in a development based on information supplied to us during the Section 73 process. In broad terms:

- For residential properties, the number of ETs depends on the density of proposed dwellings. Each detached dwelling would typically be considered one ET, while medium to high-density developments (such as flats and units) would be less than one ET per dwelling (eg, 0.8);
- For non-residential developments, the number of ETs will be assessed based on the expected volumetric demand of the proposed land use (eg, use of drinking water, discharge of wastewater);
- We may account for existing land uses if, for example, the land was already occupied and used our services. For example, if a lot with a single dwelling is subdivided to create two lots, we may apply a credit for the pre-existing dwelling and only require a payment equal to one ET (being the net increase in demand for our services).

The contribution price set out in this DSP will apply to all developments requesting a new wastewater connection, where a Section 73 Compliance Certificate will be issued after 1 July 2024. Further information on our approach to assessing the number of ETs in a development will be set out in separate policy and guideline documents that will be available on Sydney Water's website or via your Water Servicing Coordinator.

If your development also requires a new drinking water connection, you will also be required to pay a drinking water infrastructure contribution. The drinking water contribution payable by new connections in this DSP area is \$3,281.85 / ET, as set out in the Greater Sydney Drinking Water DSP.

⁴ Because IPART did not specify a value for 'average demand' in their 2020 retail price determination, we must assume a value when calculating the contribution price for a DSP area. Our approach to estimating average demand is set out in our infrastructure contribution methodology report.

3 West Camden DSP area

3.1 Systems covered by this DSP

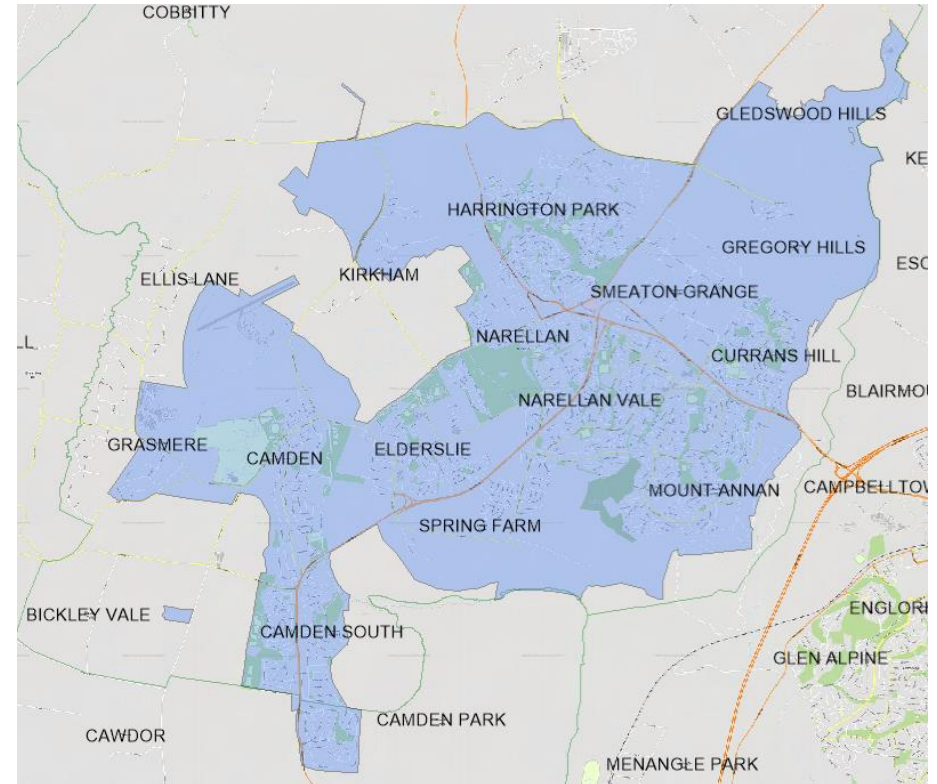

The boundary of this DSP area covers the West Camden sewage treatment system (see also Table 3-1 for selected key statistics).

A sewage treatment system consists of the wastewater pipes, pumping stations, and resource recovery centres that transport used water away from homes and businesses for treatment before being beneficially reused or safely released to the environment.

Table 3-1 – Summary statistics for systems in the DSP area (as at 2022)

| | |
|------------------------|--------|
| Catchment area | 5,418 |
| Residential population | 78,700 |

Figure 3-1 West Camden Development Servicing Plan Area

West Camden is in the catchment of the Upper Nepean River and fall within the Yarramundi 1 Sub-Zone adopted by the Environment Protection Authority (EPA) for the purposes of setting Environment Protection Licence (EPL) nutrient load limits⁵. While EPA has allocated each sewage treatment system a notional nutrient ‘allowance’, EPL compliance will be assessed at a Sub-Zone level. The licensing framework provides flexibility to direct investment so that it occurs at sites where licence limits can be achieved at least cost.

While each of the systems in the Yarramundi 1 EPL Sub-Zone essentially face the same set of performance requirements, particularly EPL licence limits, we have created the West Camden Wastewater DSP as a separate DSP area. This is largely because of the material cost difference between this system and other investment needs in Greater Macarthur region. Further information on our approach is contained in our methodology document.

3.2 Past and future development in the DSP area

This section provides an overview of past and historical development in the DSP area.

Historical development is summarised in **Figure 3-2**.

For the purposes of calculating an infrastructure contribution price for this DSP area, the forecast of future development must align to the available capacity provided by existing and future assets. In this DSP area, the forecast of future investment in new assets is limited to the next 10 years. As a result, the development forecast used to calculate the infrastructure contribution price must be limited to the amount of new development that can be serviced by assets commissioned within the next 10 years. Because asset capacity is typically delivered in large blocks, development can often continue to connect to a system for many years beyond the adopted investment horizon (see **Figure 3-3**).

⁵ EPA (2019) *Regulating nutrients from sewage treatment plants in the Lower Hawkesbury Nepean River catchment*

Figure 3-2 Historical Development in the West Camden DSP Area

Figure 3-3 Future Development in the West Camden DSP Area

3.3 Past and future assets providing services to the DSP area

This section shows the value of past (Table 3-2) and future (**Figure 3-4**) assets constructed to provide services to new development. Consistent with IPART's pricing method, asset values are shown in the year commissioning (ie, not as a cashflow). As noted above, future assets are limited to those likely to be commissioned inside the next 10 years. The value and timing of asset commissioning beyond 10 years is more uncertain, and if further investment is needed after 10 years this will be captured in a future review of this DSP.

Table 3-2 – Total present value of commissioned assets, 1970 – 2022 (\$2022-23)

| System | West Camden |
|------------------|---------------|
| Pre-1996 assets | \$19,755,516 |
| Post-1996 assets | \$112,676,200 |

Figure 3-4 Future Uncommissioned Assets in the West Camden DSP Area

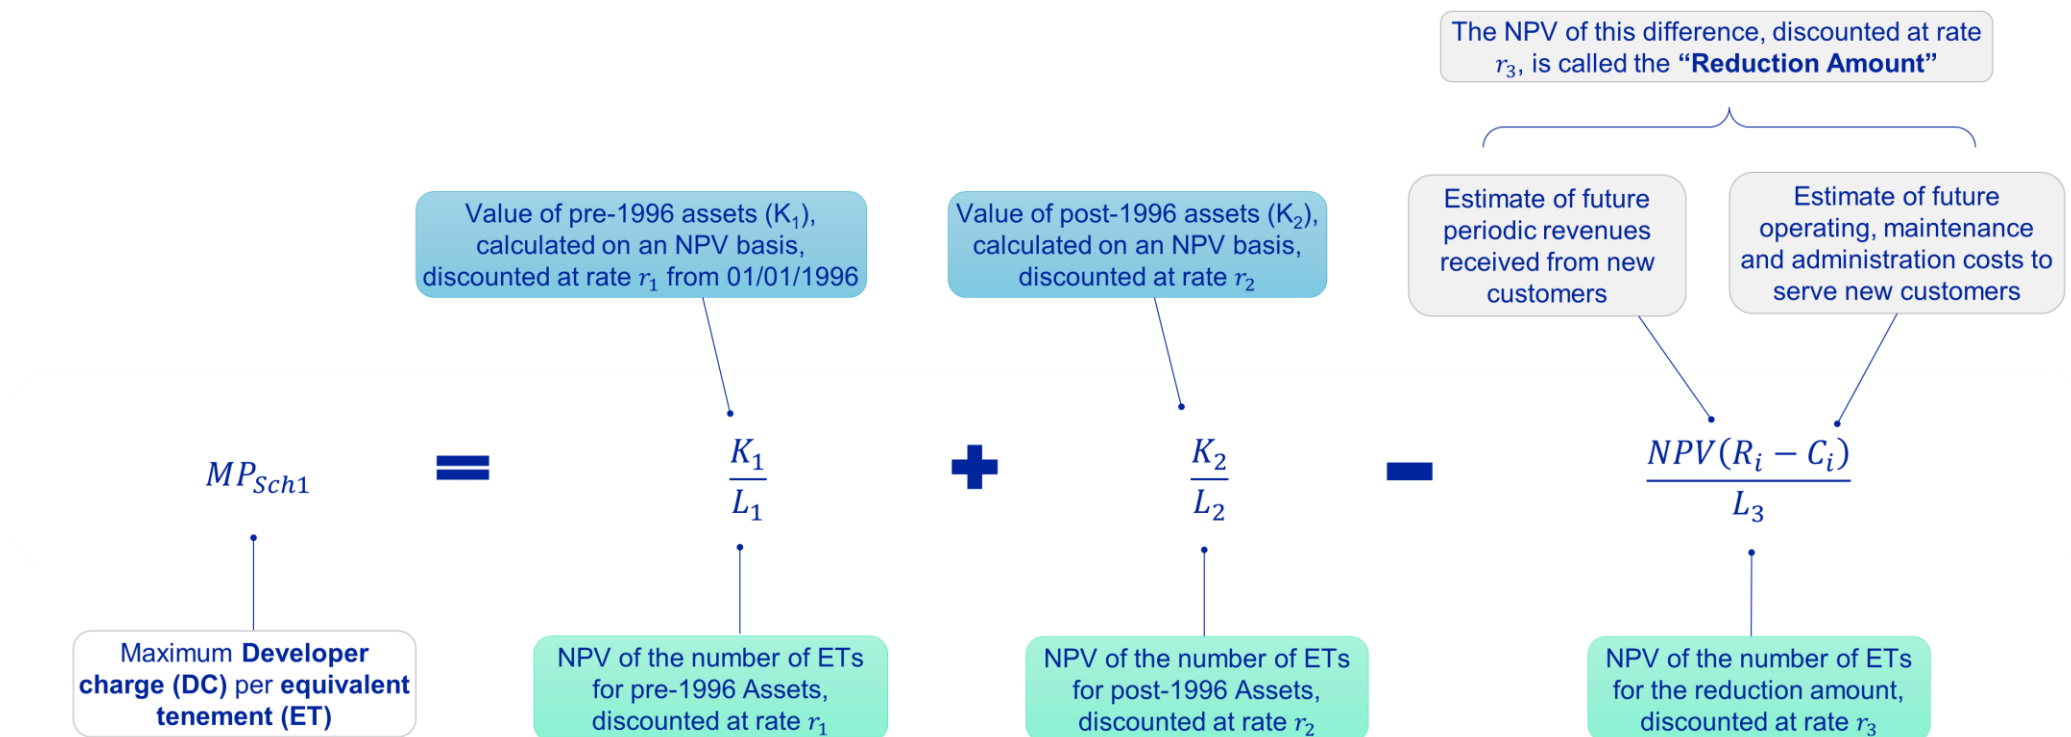

The infrastructure contribution price in this DSP will help to fund delivery of the following assets:

- West Camden
 - 2 gravity main projects, 9.29ML of storage, new rising main to service Greenfield and new growth areas, 1 storage project and Staged WRP upgrades in West Camden

4 Infrastructure contribution calculation

The main elements of IPART's pricing method are shown in **Figure 4-1**. The rest of this section presents the results of applying this method.

Figure 4-1 IPART's infrastructure contribution pricing method

4.1 Key inputs for this DSP

This section sets out assumptions used in the calculation of the infrastructure contribution price. Further detail on the approach, including assumed retail prices and escalation rates, are set out in our DSP methodology document.

Table 4-1 - Inputs to the infrastructure contribution calculation model

| Input parameter | West Camden Wastewater DSP |
|---|----------------------------|
| Base Year | 2022-23 |
| Real pre-tax discount rate for pre-1996 values (K_1 , L_1) | 3.0% |
| Real pre-tax discount rate for post-1996 values (K_2 , L_2 , L_3) | 4.2% |
| Demand of one equivalent tenement (kL / year) | 128.1 |
| Apportionment of commissioned assets | |
| (A) Total ETs (1970 – 2052) | 48,808 |
| (B) Pre-1996 ETs | 10,965 |
| (C) 1996 – 2022 ETs | 33,110 |
| Apportionment of pre-1996 assets $1 - [(B) + (C) / (A)]$ | 25.6% |
| Apportionment of post-1996 commissioned assets $1 - [(C) / (A)]$ | 32.2% |

4.2 Infrastructure contribution price elements

Table 4-2 – Charge for pre-1996 assets

| | |
|---|--------------|
| (A) Present value of pre-1996 assets (K_1) | \$19,755,516 |
| (B) Present value of equivalent tenements (L_1) | 55,417 |
| Capital charge for pre-1996 assets (A) / (B) | \$356 / ET |

Table 4-3 – Charge for post-1996 assets

| | Commissioned | Uncommissioned |
|---|---------------|----------------|
| (A) Present value of post-1996 assets (K_2) | \$112,676,200 | \$241,281,791 |
| (B) Present value of equivalent tenements (L_2) | 61,923 | 61,923 |
| Capital charge for post-1996 assets (A) / (B) | \$1,820 / ET | \$3,896 / ET |

Table 4-4 – Net operating result

| | |
|--|--------------|
| (A) Present value of revenue (R) | \$36,051,345 |
| (B) Present value of operating costs (C) | \$25,879,141 |
| (C) Present value of ETs (L_3) | 7,965 |
| Net operating result (A) + (B) / (C) | \$1,277 / ET |

4.3 Total infrastructure contribution price

The following table shows the components of the infrastructure contribution calculation.

Table 4-5 - Components of the infrastructure contribution price, \$ per ET (\$2022-23)

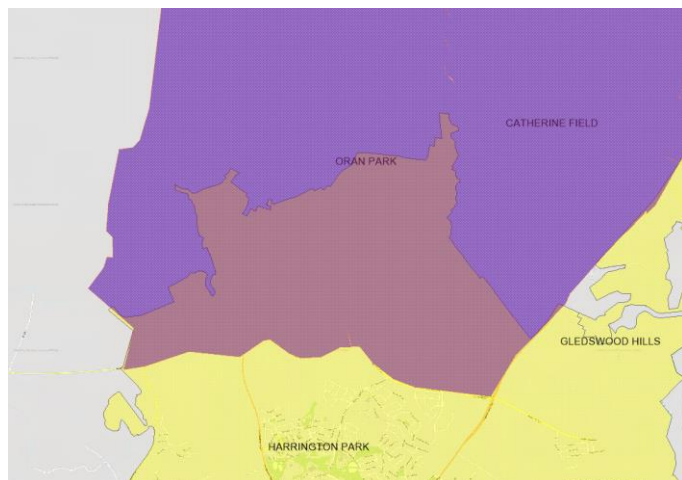

| (A) Pre-1996 commissioned assets | (B) Post 1996 assets | (C) Net operating result | Infrastructure Contribution (A) + (B) – (C) |
|-------------------------------------|-------------------------|--------------------------|--|
| \$356.49 | \$5,716.07 | \$1,277.05 | \$4,795.50 |

5 Appendices

5.1 Appendix A – Background information on the systems in this DSP

The West Camden wastewater network services a population of 78,697 and has an average dry weather flow of 14.78 ML/d. The West Camden network services Camden township and the surrounding suburbs of Camden South, Elderslie, Harrington Park, Narellan, Narellan Vale, Spring Farm, Mount Annan, Currans Hill, Kirkham, Smeaton Grange, Belimbla Park and part of Oakdale, The Oaks, Camden Park, Grasmere and Cawdor. Wastewater is transported through the wastewater network to West Camden WRP for tertiary treatment, before discharging to an unnamed tributary at Matahill Creek, 1km upstream of its confluence with the Nepean River.

Since 2011 the West Camden wastewater catchment has extended its service to the Turner Road precinct and parts of Oran Park precinct as well as Harrington Grove precinct in the South West Growth Centre (shaded maroon in the map below). This allowed for the development of new housing in these areas by taking advantage of spare capacity in the West Camden network and wastewater treatment plant. Wastewater from these areas will be re-directed to the new Upper South Creek Advanced Water Recycling Centre, which forms part of this Nepean River Wastewater DSP.

The following system upgrade will be necessary to meet the EPL target due to the impact of growth:

- Provide 316 m³ of storage at SP1198 and limit its capacity to 155 L/s to comply with the wet weather performance at downstream pumping station SP1156.
- Upgrade of additional pumping stations, including to manage the risks of dry weather overflow during power failure at SP0798 and SP1161, it recommended to provide storage and a generator at SP1198.

Figure 5-1 Major assets in the West Camden Wastewater DSP area

Map of the Camden Council area showing various wards and their boundaries. The map is color-coded: dark blue for the central urban area, light blue for surrounding areas, and green for rural areas. Wards labeled include COBBITTY, GLEDSDWOOD HILLS, HARRINGTON PARK, GREGORY HILLS, SMEDON GRANGE, KIRKHAM, NARELLAN, CURRANS HILL, GRASMERE, CAMDEN, NARELLAN VALE, BLAIRM, ELDERSLIE, MOUNT ANNAN, SPRING FARM, CAMPBELL T, KLEY VALE, CAMDEN SOUTH, CAMDEN PARK, CAWDOR, MENANGLE PARK, ENGLAND, GLEN ALPINE, and ROSMID.

(Sydney Water Talk
website)

- (1) the date (or forecast date) of the commissioning of each Asset;
- (2) the size/length of each Asset;
- (3) the actual efficient cost of each Asset (where applicable);
- (4) the unit cost of each Asset (if applicable);
- (5) the MEERA valuation of each Asset (if applicable);
- (6) the total capacity of each Asset expressed in Equivalent Tenements (if applicable); and
- (7) the details of the number of Equivalent Tenements served by each Asset in each DSP Area, where that Asset serves more than one DSP Area

The proposed DSP areas and infrastructure contribution prices were on public exhibition for a period of 51 working days, from 28 April 2023 to close-of-business on 7 July 2023.

Sydney Water reviewed all submissions received during the exhibition period and submitted a final proposal to IPART on 31 August 2023.

IPART will review and register each DSP, and each DSP will remain in force until reviewed and replaced.
