## Concentration Limit Table

## Quakers Hill Wastewater Treatment Plant

EPL 1724
Updated 10-08-2023

Sydney Water's treatment plants operate under environmental protection licences issued by the NSW Environmental Protection Authority (EPA). For each monitoring/discharge point the concentration of a pollutant must not exceed the concentration limits specified for that pollutant in the table.

| pollutant | unit of measure | 3DGM limit | 50 percentile limit | 80 percentile limit | 90 percentile limit | 100 percentile limit | average limit |

Licence limits for Ceriodaphnia dubia immobilisation (EC50) and sea urchin sperm fertilisation (EC50) are breached if the result is below the EPA specified limit value.

3 Day Geometric Mean (3DGM) is a way to average a set of values and is commonly used with water quality assessments which show a great deal of variability. 3DGM is calculated by multiplying the results of the analysis of three samples collected on three consecutive days and then taking the cubed root of that amount.

A licence condition with a 100 Percentile Limit means that $100 \%$ of samples (or all samples) taken must not exceed the limit for that pollutant. This can be extrapolated for other percentiles, for example an 80 Percentile Limit means that $80 \%$ of samples taken must not exceed the limit for that pollutant within the annual licence period.
