

We're working in your area

October and November 2026

Sydney Water, in partnership with Fulton Hogan, is continuing construction at Sherwin Park Canley Vale, to increase recycled water services in the years to come, and ensure our infrastructure can handle increased demand. This work involves connecting the newly constructed pipes to the existing pipeline. We'll disconnect the existing pipeline to support the changeover to the new connection.

Sydney Water supplies recycled water for specific uses to businesses and homes within the recycled water network. Reusing water is a great way to make sure we reduce the amount of water used for things like sports fields irrigation and flushing toilets.

What you need to know

This construction changeover work is a 24 hour a day work program. Some activities are expected to be noisier than others, including welding, pipe laying, backfilling, compaction and concrete pours.

We'll begin by emptying and cleaning the existing pipeline. We'll place the new pipeline into the area. Our crews will then complete welding work in the ground, then backfill and pour concrete to cover and restore the area.

We expect this work to take up to 8 days and nights, with an additional 2 days allowed in case of weather or other unexpected delays. Machinery is expected to be used for up to 7 days and nights. The noise will be similar to the day work that is currently taking place in the area.

The map over the page shows our work area.

Our work schedule

Changeover work is expected to take 10 shifts to complete, between **20 and 30 October 2026**, weather and ground conditions permitting.

We will let you know if things change.

The most impactful days and nights of work is expected to be between **20 and 23 October**.

We will return for a second changeover scheduled in November.

Work hours

We'll be working day and night for up to 10 days, which includes working on weekends.

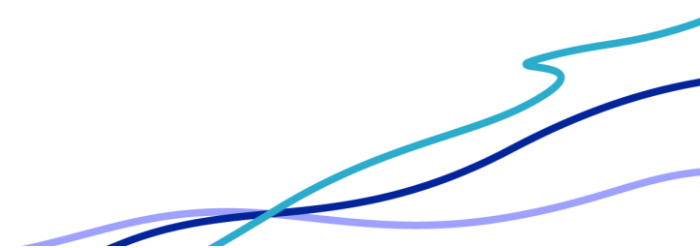

Work will be noisy and to help manage the noise, there will be breaks between 6am and 7am and 6pm and 7pm.

What you can expect

We know our work can be disruptive, especially at night, and we'll do what we can to reduce impacts. You may experience:

Impact to services

Your water and wastewater services **won't** be impacted while we do this work.

Noise and odour

Pipe cutting, laying and welding work is expected to be noisy, including at night and in the early morning. Ahead of this work, temporary odour may be experienced during isolation, draining and pumping existing water away from Sherwin Park.

We know loud noise and odour can make day to day life harder for residents. Our crews are on site now so pipes can flow and we can safely and efficiently improve services.

We'll plan the work carefully to reduce these impacts by:

- putting in place measures to reduce noise and odour
- monitor our activities regularly
- schedule our noisiest activities earlier in our shift, where possible, to avoid disruption and discomfort during the night
- respond to your requests for more information and concerns during the work
- complete the work as quickly as possible.

Traffic and parking

Machinery and trucks will take up parking space on Togil Street, Sherwin Park. Our traffic controllers will help ensure safe movements into the site area.

Reverse beepers (and squeakers at night) that keep our workers safe around moving machinery and equipment will be used.

We'll turn these off when not in use to reduce noise and avoiding unnecessary movements at night.

Dust and vibration

There may be some dust and vibration when using larger machinery and equipment such as cranes, compaction rollers, excavators, pumps and trucks.

We'll choose the most appropriately sized machinery to minimise vibration.

Lighting at night

We'll use lighting towers and generators to help crews work safely at night, and we'll direct lights away from homes where possible.

Where to get more information

If you would like to know more, please contact our Community Engagement Advisor, Shelley, during business hours on:

- Phone: **1800 354 108**
- SMS: 0428 776 864
- Email: MalabarProgram@sydneywater.com.au

For any special arrangements during the work at night, please contact our site supervisor, Martin on 0499 202 162

Thank you for your cooperation during this essential work.

Work location

The area in light blue shows the pipeline connection area. The area in dark blue shows the work compound. The yellow arrow shows where trucks, vehicles and machinery will enter from Togil Street, Canley Vale.
