

14 April 2026

Ryde to Pymble pipeline upgrade – Compound establishment - Vimiera Road, Marsfield

To support Sydney’s growing communities, Sydney Water is reinstating the Ryde to Pymble (RP03) water pipeline to strengthen network resilience and support population growth across Sydney’s northern suburb.

Our delivery partners McConnell Dowell–Gamuda Joint Venture (MDGJV) will set up a compound site on Vimiera Road, Marsfield starting Friday, **24 April 2026**, with work continuing through to **late December 2027**, weather permitting.

What you need to know

In late April, we will begin establishing the compound site on Vimiera Road. This site will be used to install a section of pipeline that will go underneath the M2 and Lane Cove National Park. For this stage of the works, we will use a trenchless technique that will use a micro tunnel boring machine to avoid any ground disturbance in these environmentally sensitive areas. A launch shaft will be excavated to accommodate the launch of the micro tunnel boring machine. You may see increased truck movements to and from the compound during the day as we undertake our work.

Our work hours

Our work hours are between **7am and 6pm Monday to Friday** and **8 am to 6pm on Saturdays**. There will be no work on Sundays. From time to time, we may need to work outside of these hours, you will be notified prior, if we need to.

Minimising noise and dust

We know our work can be disruptive, and we'll make every effort to reduce any impact this work may have on you. During this time, you may experience some noise and dust from our activities. We will continue to monitor noise and dust levels and work directly with affected residents to mitigate noise wherever feasible.

To mitigate the potential for noise and dust, where required we will implement:

- Provide noise barriers and acoustic sheds
- Undertake noisy work during core work hours, where possible
- Ensure all equipment is shut down when not in use and non-tonal reversing beepers used on vehicles
- The use of noise blankets
- Dust suppression methods i.e.: watering down the site to minimise dust from becoming airborne
- Covering materials: Materials that are prone to generating dust are covered when not in use
- Proper waste management

Where do I get more information?

We're committed to keeping you informed by sending out a weekly email update which will include upcoming work and project updates. If you would like to be added to our email distribution list, please scan the QR code which will direct you to our website where you can subscribe.
