

PRW Discovery Centre Open Day

Join us for a free tour at the Purified Recycled Water (PRW) Discovery Centre, meet the project team and learn about the proposed introduction for PRW.

The future of water is here!

To deliver on the vision for a sustainable and resilient water supply, Sydney Water is investigating the introduction of purified recycled water (PRW) as an option for safe, rainfall-independent water. Together with desalination, PRW could support our dams in providing the world class water we enjoy every day.

Date: Saturday, 18 January 2025

Time: 09:00 - 12:00

Address: 240 Quakers Road, Quakers Hill

Spaces are limited.

To RSVP or for more information, please email PRW@sydneywater.com.au

Sydney
WATER

Did you know?

Sydney Water is planning a proposed PRW scheme as a part of upgrades to our existing Quakers Hill Water Resource Recovery Facility. The scheme will allow us to use water that would otherwise be sent out to the ocean.

Instead of wasting this water, we can treat it to the highest standards using ultrafiltration, reverse osmosis, ultraviolet light disinfection with advanced oxidation and finally chlorine contact disinfection. Water leaving the PRW Treatment Plant would mix with water from Warragamba Dam and Upper Nepean Dam in Prospect Reservoir before being treated again at the Prospect Water Filtration Plant.

This triple treated water would provide high quality water to meet growing demand for the future.
