

We're working in your area

20 September 2026

We've started work to deliver 4.3 kilometres of new wastewater pipelines in Thompsons Creek as part of the Upper South Creek Networks Program, delivering essential wastewater services to Western Sydney's growing communities.

This work will be done in stages, across several locations along Fifteenth Avenue, Ramsay Road and surrounding areas. Along this alignment, our delivery contractor Tunnelling Solutions will be using micro-tunnelling to install underground pipes. This is a trenchless method where the tunnelling machine is launched and retrieved from excavation pits. We'll have worksite facilities, equipment storage areas and an increase in truck movements in these work areas.

We expect to finish our main construction work in the area by mid-2027, weather and ground conditions permitting.

Traffic changes on Wishart Road

Part of our work area is near the intersection of Wishart Road and Fifteenth Avenue. To keep our workers and road users safe, a partial lane closure will be in place around the work area.

Traffic will be on a stop/slow arrangement, and traffic controllers will be in place to safely assist vehicles around the work area.

The work area and traffic changes are shown on the map over the page. Please take care when travelling through the area and follow the directions of traffic controllers.

We know our work can be disruptive. We'll make every effort to reduce any impact this work may have on you. We appreciate your patience as we complete this critical work.

Standard work hours

Our standard work hours are **7 am to 6 pm, Monday to Friday**, and **8 am to 1 pm on Saturdays**.

We won't work on Sundays or public holidays.

Out-of-hours work

Some work may need to take place outside standard work hours to minimise traffic impacts and maintain the safety of our workers, road users and pedestrians.

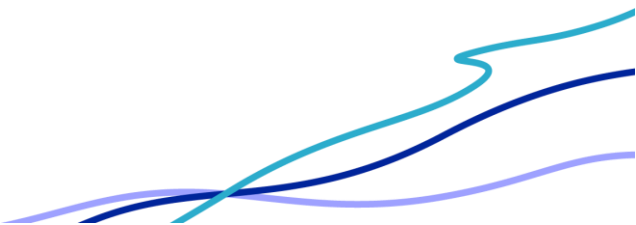

To support micro-tunnelling activities, we'll need to undertake dewatering at excavation pits to remove excess water. This will allow tunnelling works to progress safely and efficiently.

Due to the critical nature of this activity, **dewatering may be required at any time, 24 hours a day, seven days a week.**

Dewatering activities will involve using pumps and generators, lighting during the evening or night, and worker and light vehicle movements.

Other low impact out-of-hours activities may include deliveries of oversized machinery and equipment, concrete pours, waste management, soil disposal, equipment maintenance, worker movements, refuelling and generator use.

Out-of-hours work will be carried out in line with the project environmental protection licence, road occupancy licences, and Transport for NSW requirements.

Noise

There may be periods of noise from digging and heavy machinery. We'll follow approved respite periods and use measures such as noise blankets where possible to help reduce noise impacts.
