

# We're working in your area

**28 April 2026**

We are building new wastewater pipelines and pumping stations as part of the Upper South Creek Networks Program to ensure that western Sydney's growing communities are connected to world-class wastewater services.

Over the next 10 years, Sydney Water and CreekConnect will work together with our contractors to build the new wastewater mains and pumping stations across the Upper South Creek precincts.

## What you need to know

We have engaged Quickway Constructions to construct the new Cosgroves Creek pumping station at 546 – 640 Luddenham Road, opposite the future Sydney Metro Luddenham Station. Construction will commence shortly. The work will involve:

- site establishment including survey work and setting up temporary site offices, amenities, and stockpile areas
- earthworks to level the site
- building an access road off Luddenham Road
- installing formwork and pouring concrete
- excavation for the pumping station
- delivery and removal of materials and equipment to and from site
- installation of tower crane
- installing pipework, pumps, ventilation shafts, and other civil and electrical works.

The map attached shows our work area.

## Our work schedule

Construction will take place between **May 2026 and April 2027**, weather and ground conditions permitting.

## Work hours

The Cosgroves Creek pumping station site is located away from residential properties, so we expect construction impacts on the surrounding community to be minimal.

For this reason, we will work extended hours during the initial phase of work, from **7 am to 6 pm, Monday to Sunday**. Typically, we will work a 6-day week. We may work on Sundays depending on progress on site. We won't work on public holidays.

If we need to work outside these hours, or at night, we will notify you in advance.

## What you can expect

We know that some of our work can be disruptive, so we'll make every effort to reduce any impact this work may have on you. You may experience:

## Noise

At times, there may be some noise from the digging and heavy machinery.

We will keep noise to a minimum, avoid unnecessary loud noises and follow all mitigation measures in the construction environmental management plan.

### Traffic changes

There will be frequent vehicle movements in and out of the site during our approved working hours. Truck movements will vary each day depending on the work activity.

When needed, our traffic controllers will help keep traffic flowing safely and minimise disruption to local traffic. We'll make sure our workers understand the importance of driving safely and within speed limits.

### Impact to services

Your water and wastewater services **won't** be impacted while we do this work.

### Dust and mud

Some of our work will create dust, which can get worse in windy weather.

We will manage dust by wetting down our work areas, access roads and stockpiled material.

We will inspect our work areas often to make sure they are tidy and organise a street sweeper to make sure mud isn't tracked off site onto local roads.

### Where to get more information

If you would like to know more, please contact our Community Engagement Team at **uscnetworks@sydneywater.com.au** or call **1800 010 083**.
