Important Disclaimers:

The work presented in this document was carried out in accordance with the Renzo Tonin & Associates Quality Assurance System, which is based on Australian/New Zealand Standard AS/NZS ISO 9001.

This document is issued subject to review and authorisation by the suitably qualified and experienced person named in the last column above. If no name appears, this document shall be considered as preliminary or draft only and no reliance shall be placed upon it other than for information to be verified later.

This document is prepared for the particular requirements of our Client referred to above in the 'Document details' which are based on a specific brief with limitations as agreed to with the Client. It is not intended for and should not be relied upon by a third party and no responsibility is undertaken to any third party without prior consent provided by Renzo Tonin & Associates. The information herein should not be reproduced, presented or reviewed except in full. Prior to passing on to a third party, the Client is to fully inform the third party of the specific brief and limitations associated with the commission.

In preparing this report, we have relied upon, and presumed accurate, any information (or confirmation of the absence thereof) provided by the Client and/or from other sources. Except as otherwise stated in the report, we have not attempted to verify the accuracy or completeness of any such information. If the information is subsequently determined to be false, inaccurate or incomplete then it is possible that our observations and conclusions as expressed in this report may change.

We have derived data in this report from information sourced from the Client (if any) and/or available in the public domain at the time or times outlined in this report. The passage of time, manifestation of latent conditions or impacts of future events may require further examination and re-evaluation of the data, findings, observations and conclusions expressed in this report.

We have prepared this report in accordance with the usual care and thoroughness of the consulting profession, for the sole purpose described above and by reference to applicable standards, guidelines, procedures and practices at the date of issue of this report. For the reasons outlined above, however, no other warranty or guarantee, whether expressed or implied, is made as to the data, observations and findings expressed in this report, to the extent permitted by law.

The information contained herein is for the purpose of acoustics only. No claims are made and no liability is accepted in respect of design and construction issues falling outside of the specialist field of acoustics engineering including and not limited to structural integrity, fire rating, architectural buildability and fit-for-purpose, waterproofing and the like. Supplementary professional advice should be sought in respect of these issues.

External cladding disclaimer: No claims are made and no liability is accepted in respect of any external wall and/or roof systems (eg facade / cladding materials, insulation etc) that are: (a) not compliant with or do not conform to any relevant non-acoustic legislation, regulation, standard, instructions or Building Codes; or (b) installed, applied, specified or utilised in such a manner that is not compliant with or does not conform to any relevant non-acoustic legislation, regulation, standard, instructions or Building Codes.

1 Introduction

1.1 Purpose and application

This Construction Noise and Vibration Impact Statement (CNVIS) has been prepared on behalf of John Holland for the construction of the Upper South Creek (USC) Advanced Water Recycling Centre (AWRC) project (the Project). This CNVIS has been prepared to satisfy Planning Approval (SSI 8609189) Condition E48 and is specific to the Pipelines component of the project, a separate CNVIS has been prepared to address noise and vibration impacts resulting from the construction of the AWRC. These components are further defined in Section 1.2 below.

1.2 Overview

The USC AWRC project will provide wastewater services and recycled water for the Aerotropolis and South West Growth Areas. The Project includes the construction of a new Advance Water Recycling Centre and both treated water and brine pipelines. The brine pipeline will run 24km connecting the existing Malabar wastewater system at Lansdowne to the AWRC at Kemps Creek. The treated water pipeline will run 17km from the AWRC to the Nepean River at Wallacia. An overview of the Project extent is presented in Figure 1, Figure 2, Figure 3, Figure 4, Figure 5 and Figure 6.

Figure 1: Overview of Project extent 1

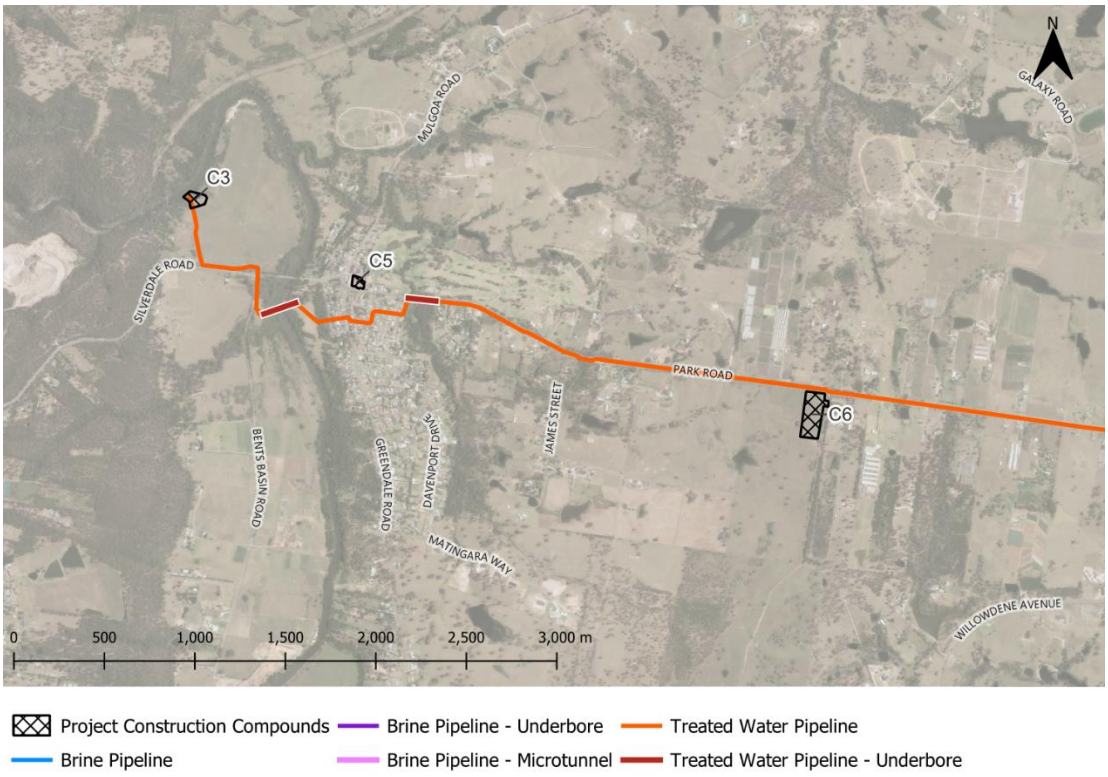

Figure 2: Overview of Project extent 2

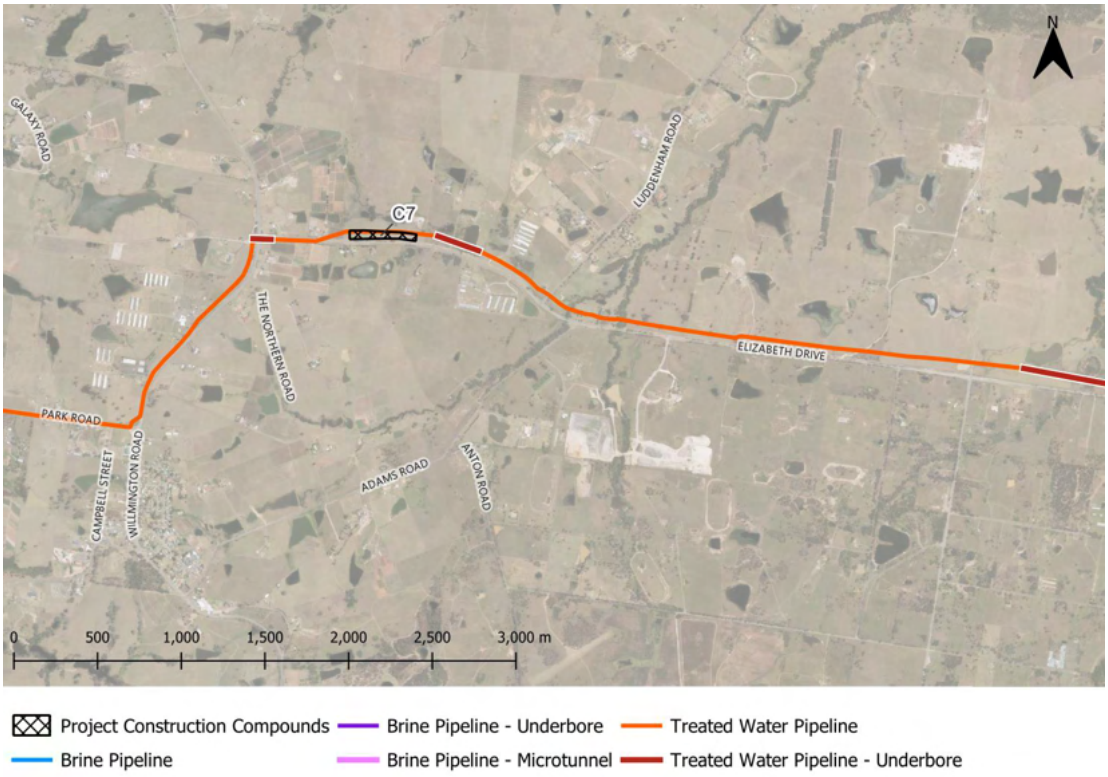

Figure 3: Overview of Project extent 3

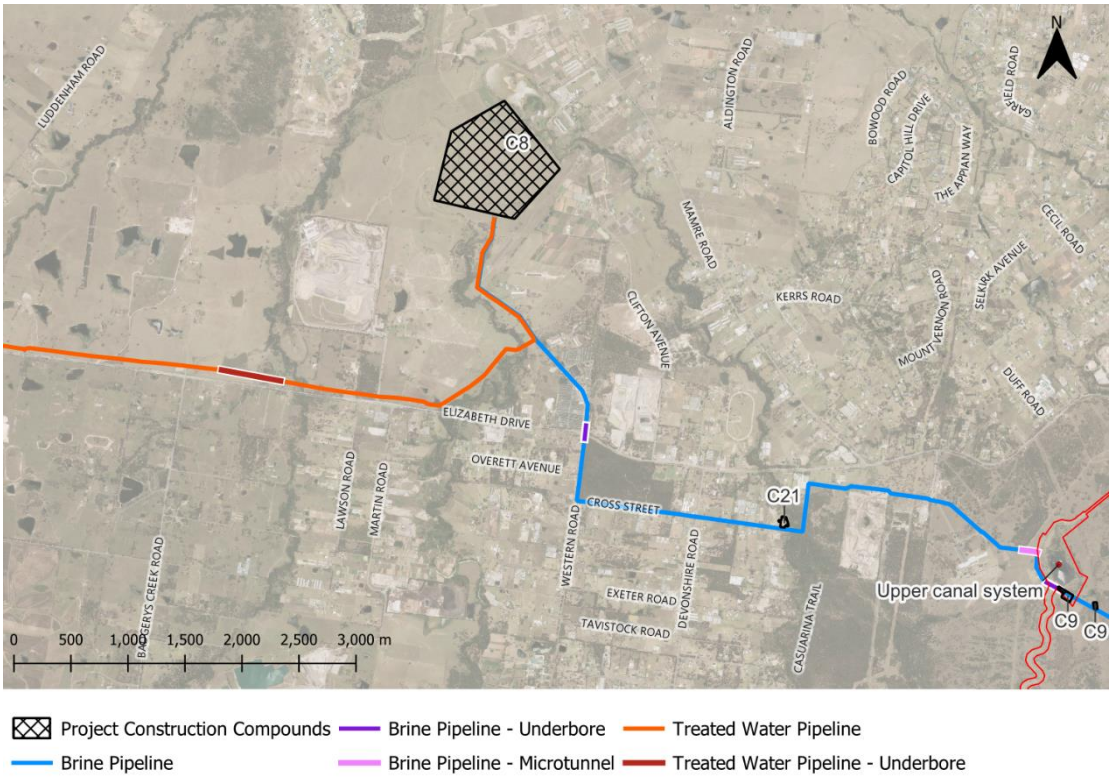

Figure 4: Overview of Project extent 4

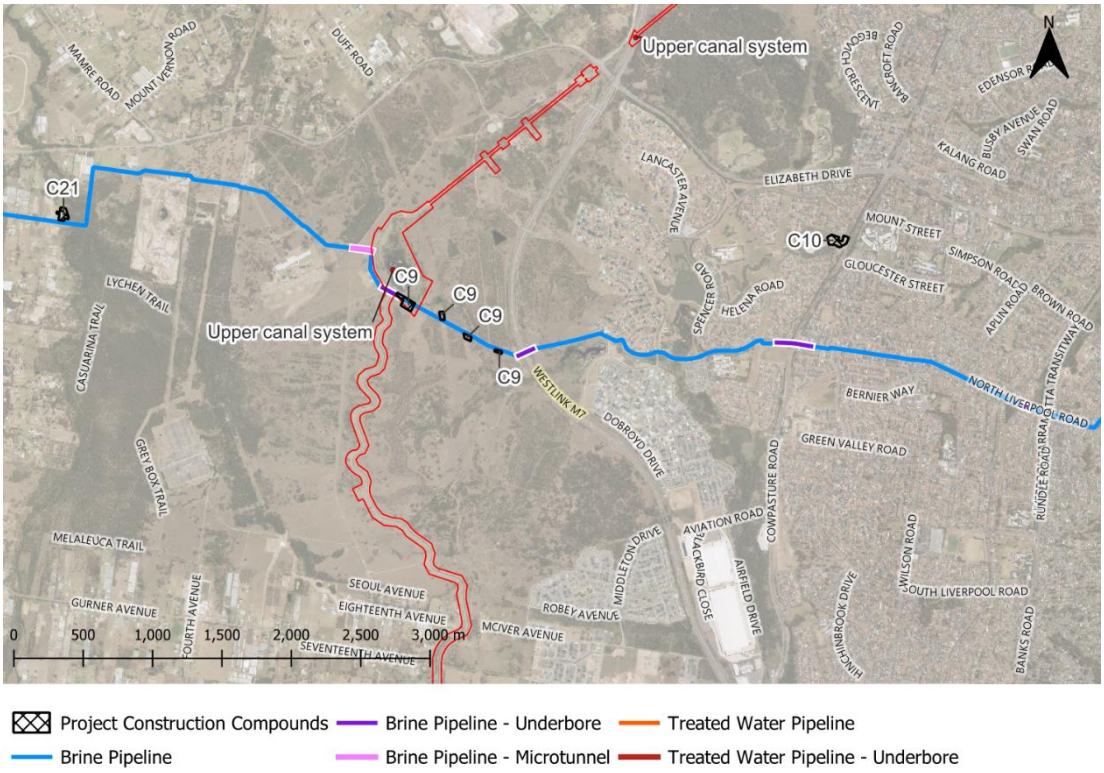

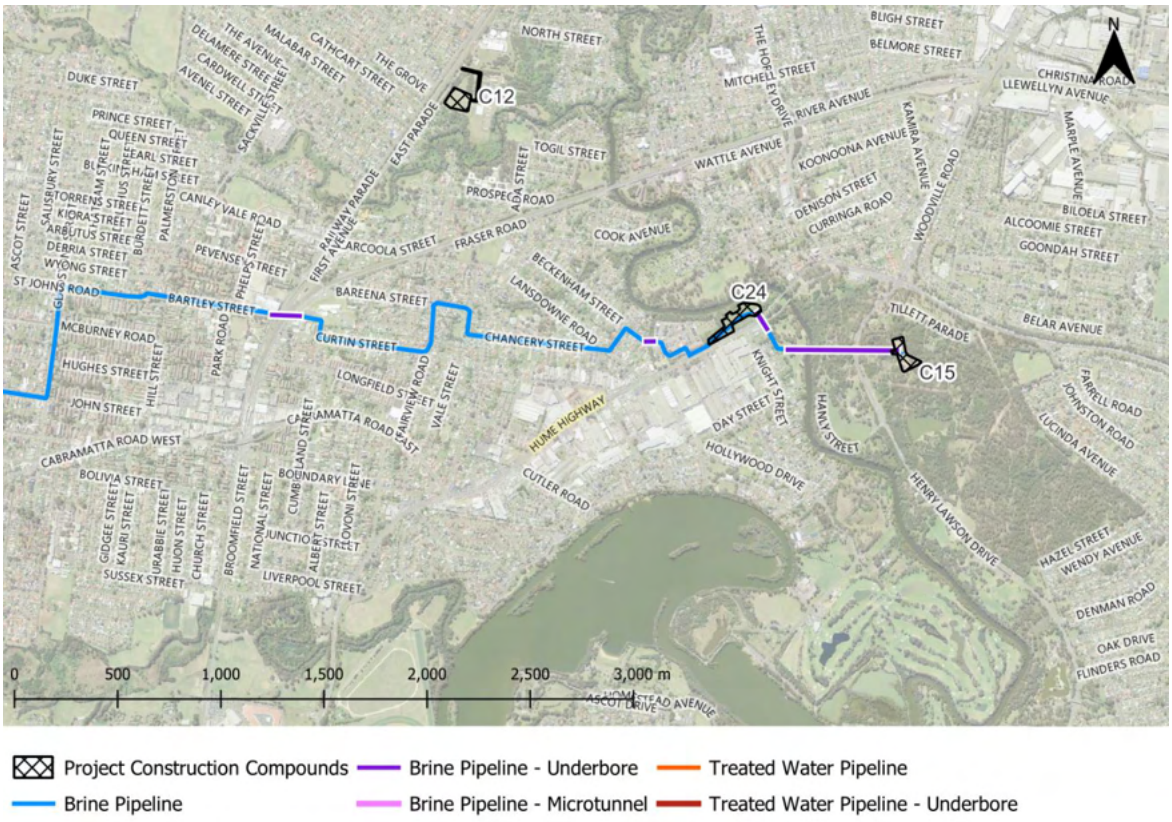

Figure 5: Overview of Project extent 5

Figure 6: Overview of Project extent 6

The aim of this assessment is to identify work which exceeds the noise management levels, vibration criteria and/or ground borne noise levels set out in Section 4 at any residence outside construction hours identified in Section 2.2 or where receivers will be highly noise affected. The CNVIS includes specific mitigation measures which have been identified through consultation with affected sensitive land uses. These mitigation measures will be implemented for the duration of the Works. The CNVIS will help John Holland to minimise the impact of construction noise and vibration on sensitive receivers and demonstrate compliance with relevant Conditions of Approval, the Upper South Creek AWRC Environmental Impact Statement (EIS)[3], the Environmental Mitigation Measures (EMMs) included in the USC AWRC EIS Submissions Report (EIS RtS) [4], USC AWRC EIS Submissions Report – Project Amendments (Amendment RtS) and Construction Noise and Vibration Management Plan (CNVMP) (USCP-JHG-MPL-ENV-0007).

1.3 Construction Noise and Vibration Impact Statement

Construction Noise and Vibration Impact Statements (CNVIS) provide a quantitative noise and vibration assessment of activities and/ or locations where construction work will occur. They clarify details provided in the EIS Noise and Vibration technical Report [3], updated to include the more detailed information available at the detailed design and construction planning stage of the Project. CNVIS are structured to meet the requirements of Condition of Approval E48, including specific mitigation measures to be implemented for the duration of the assessed works, identified through consultation with affected sensitive land user(s).

This CNVIS provides a noise and vibration assessment of the pipeline works that are required to be completed within and outside of standard construction hours. Works associated with construction of the AWRC are assessed in a separate CNVIS (TM588-12F01 CNVIS AWRC).

The works covered by this CNVIS will be undertaken in accordance with the CEMP (incorporating the CNVMP).

1.4 Quality assurance

The work documented in this report was carried out in accordance with the Renzo Tonin & Associates Quality Assurance System, which is based on Australian Standard / NZS ISO 9001. Appendix A contains a glossary of acoustic terms used in this report.

2 Construction works and hours

2.1 Construction works addressed in this CNVIS

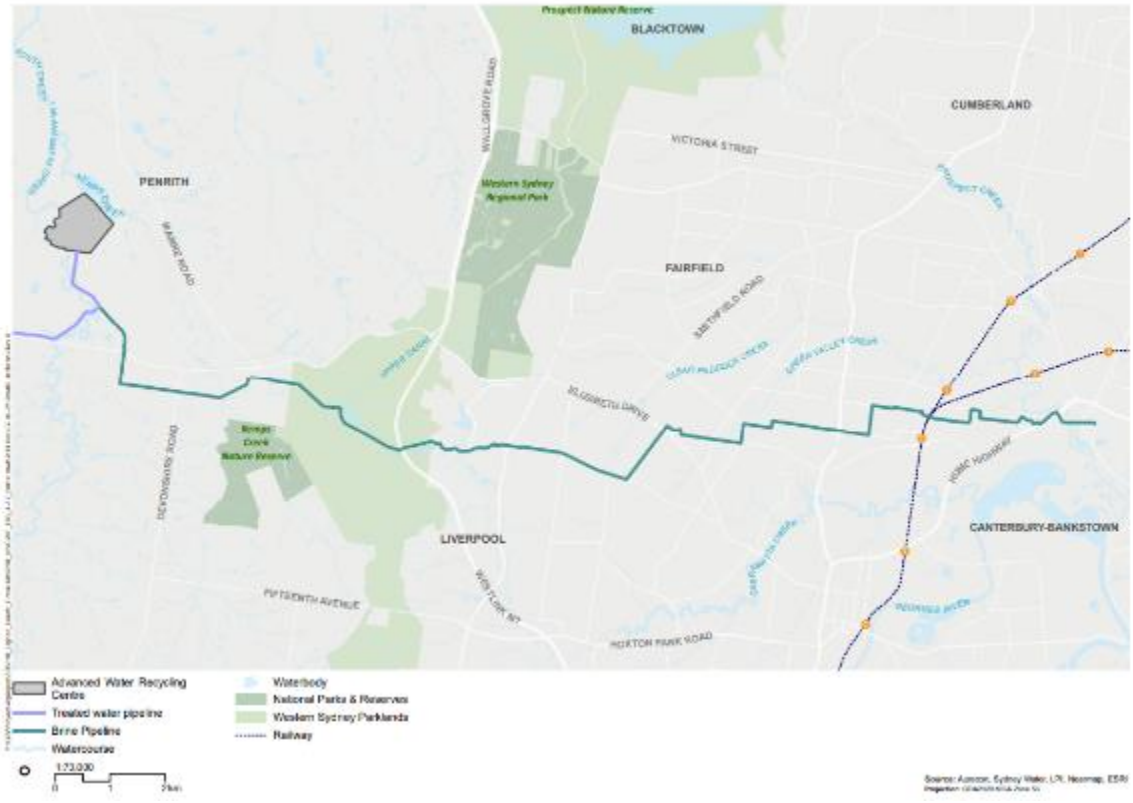

2.1.1 Location of worksite

The USC pipeline runs between Lansdowne and Wallacia and consists of two main pipelines, one for treated water for discharge into the Nepean River, and one to convey brine to existing Sydney Water infrastructure. Figure 7 shows the treated water pipeline alignment and Figure 8 shows the brine pipeline alignment.

Figure 7: Treated water pipeline alignment

Figure 8: Brine pipeline alignment

2.1.2 Construction works

The pipeline works will be delivered through the following sub-stages:

- Site compound establishment and operation
- Potholing and early works
- Site establishment and mobilisation
- Excavation
- Pipe installation
- Trenchless installation
- Landscaping and rehabilitation

The works are proposed to be undertaken during standard construction hours. Some works will also be completed outside standard construction hours, where this is necessary and the out of hours works (OOHW) are justified (see Section 2.2.1). The timing and location of the works are summarised in Table 2.1.

Table 2.1: Summary of construction works under this CNVIS

Activity/ work area	Aspect	Construction hours	Location of activity	Timing of activity
Site Compounds	Site establishment	Standard hours	All compounds (excluding C08 AWRC)	1 week for each compound
	Compound operation	Standard hours + OOHW (D/E/N)	All compounds (excluding C08 AWRC)	52 weeks
Brine/ treated water pipelines	Potholing and early works	Standard hours + OOHW (D/E/N)	Entire pipeline	4 weeks
	Site establishment and mobilisation	Standard hours (D)	Entire pipeline	4 weeks
	Excavation	Standard hours + OOHW (D/E/N)	Entire pipeline	45 weeks
	Pipe installation	Standard hours + OOHW (D/E/N)	Open trench pipeline	45 weeks
	Trenchless installation	Standard hours + OOHW (D/E/N)	HDD and microtunnel pipeline	40 weeks
	Landscaping and rehabilitation	Standard hours + OOHW (D/E/N)	Entire pipeline	17 weeks

Notes: 'OOHW' means Out of Hours works, or work outside the standard construction hours (see Section 2.2)

'OOHW(D)' is the OOH 'Day' period,; 8am to 6pm Sunday, 1pm to 6pm Saturday and 7am to 6pm Public Holidays

'OOHW(E)' is the 'Evening' period, 6pm to 10pm Monday to Sunday

'OOHW(N) is the OOH 'Night' period, 10pm to 7am Sunday/Monday to Thursday/ Friday; 10pm to 8am Friday/Saturday and Saturday/ Sunday

A detailed summary of the construction activities assessed in this report is presented in Section 5.1 and in Table C.1 of APPENDIX C.

2.1.3 Construction traffic

When construction related traffic moves on the public road network, a different noise assessment methodology is appropriate as vehicle movements would be regarded as additional road traffic on public roads rather than as part of the construction site's activities.

The location of the construction works will change over the duration of the Project as the pipeline is installed. Construction traffic routes will vary over the duration of the Project depending on the location of the pipeline installation works. Construction traffic will use both busy arterial roads and low traffic local roads for access and egress routes.

The worksite will generate additional traffic movements in the form of:

- Light vehicle movements generated by construction personnel travelling to and from work
- Heavy vehicle movements generated by:
  - Delivery vehicles bringing raw materials, plant, and equipment to the site (typically standard hours, except for oversized deliveries)
  - Concrete trucks bringing concrete to the site (typically standard hours)

Construction traffic noise, related to the public road network, is addressed in Section 8.

2.2 Construction Hours

Construction hours for the Project are outlined in Conditions of Approval E40, E41 and E42. Table 2.2 consolidates the information provided in these Conditions regarding construction working hours for the Project.

Table 2.2: Working hours for construction worksites

CoA	Construction Activity	Monday to Friday	Saturday	Sunday / Public holiday
E40	Standard construction	07:00 to 1800	08:00 to 13:00	No work[1]
E41	Highly noise intensive works[2]	08:00 to 18:00 (plus respite[2])	08:00 to 13:00 (plus respite[2])	No work[1]
E42(a)	Safety and emergency work	At all times	At all times	At all times
E42 (b)	Low noise impact work[3]	At all times	At all times	At all times
E42 (c)	Works approved under an EPL or Out-of-Hours Work Protocol or through negotiated agreement with directly affected residents and sensitive land user(s)	At all times	At all times	At all times

Notes:

1. No work unless permitted and approved.
2. Minimum respite from highly noise intensive works of not less than one (1) hour between each continuous block of works not exceeding three (3) hours.
3. Construction that causes $L_{Aeq(15\ minute)}$ noise levels no more than 5dB(A) above the Rating Background Level (RBL) at any residence; and/or no more than the 'noise affected' NMLs specified in Table 3 of the ICNG at other sensitive land user(s). Construction that causes continuous/impulsive/intermittent vibration values at the most affected residence, no more than the preferred values for human exposure to vibration, specified in Table 2.2 and Table 2.4 of the AVTG.

2.2.1 Justification for OOHW

Works will mostly be completed during standard construction hours. Some of the works would require lane closures to allow the works to be completed safely and would be undertaken outside standard construction hours where the road authority will only issue a Road Occupancy Licence (ROL) to permit this activity outside standard hours. Additionally, site compound operation outside standard hours may be required to support works subject to an ROL. In these instances, works may be outside the hours specified in Condition E40 (Table 2.2). Therefore, works may need to be undertaken outside of standard construction hours, as per Condition E42(a), (b) and (c).

All reasonable and feasible mitigation and management measures will be implemented to reduce noise from the works with the aim of achieving the relevant NMLs.

Out-of-hours work under CoA E42(c) would be undertaken through the Project's Out of Hours Works Protocol [2] (OOHW Protocol) or under the Environment Protection Licence (EPL) number 21800 for works subject to an EPL.

2.2.2 Assessment periods

The standard hours and out of hours work (OOHW) periods for construction works are depicted in Table 2.3. The OOHW periods are further defined as OOHW Period 1 and 2, based on the CNVS [1].

Construction traffic is assessed over a fifteen-hour day period, between 7am and 10pm (typically standard hours plus OOHW Period 1) and a nine-hour night period, between 10pm and 7am (typically OOHW Period 2). This is consistent with the NSW Road Noise Policy [7] and the CNVS [1].

Table 2.3: Assessment periods

Day/ Time	12am – 1am	1am – 2am	2am – 3am	3am – 4am	4am – 5am	5am – 6am	6am – 7am	7am – 8am	8am – 9am	9am – 10am	10am – 11am	11am – 12pm	12pm – 1pm	1pm – 2pm	2pm – 3pm	3pm – 4pm	4pm – 5pm	5pm – 6pm	6pm – 7pm	7pm – 8pm	8pm – 9pm	9pm – 10pm	10pm – 11pm	11pm – 12am
Monday to Friday																								
Saturday																								
Sunday or Public Holiday																								

Notes:

1. Light Blue = Period 1
2. Dark blue = Period 2
3. White = Standard construction hours

3 Existing environment

3.1 Land use survey

To assess and manage construction noise and vibration impact, a Land Use Survey has been undertaken to satisfy Condition E39. The Land Use Survey identifies existing land use and development along the Project alignment, including a mix of residential, commercial and industrial uses; along with other noise and vibration-sensitive businesses, such as Hotels and childcare facilities. Heritage receivers have been identified in the EIS [3] and in the land use survey.

The Land Use Survey is maintained in a Geographic Information System (GIS) established for the Project and was used in the preparation of this CNVIS. The land use at the time of issue of this CNVIS is depicted in APPENDIX B. The land use revision date is shown in the top left corner of the drawing.

3.2 Noise Catchment Areas

Further to the Land Use Survey, residential areas have been divided into Noise Catchment Areas (NCAs) based on those established in the EIS [3] for the Project. NCAs group individual sensitive receivers by common traits, such as existing noise environment and location in relation to the Project works. NCAs relevant to the pipeline worksite are identified in APPENDIX B.

3.3 Baseline noise levels

As part of the EIS process, receivers within the vicinity of the Project were divided into NCAs, which reflect the land uses and the nature and types of receivers within the vicinity of the Project. Noise monitoring results in the M12 Motorway EIS and assumed background noise levels listed in AS 1055.3:1997 were used in the EIS determine RBLs and ambient noise levels (L_{Aeq}) for each NCA. The RBL represents the average minimum background sound level for each measurement period, averaged over the measurement days. The RBLs and average ambient noise levels for the day, evening and night assessment periods are summarised in Table 3.1 and in Table B.1 in APPENDIX B.

Table 3.1: Summary of baseline noise monitoring data from EIS

Monitor ID (EIS)	Rating Background Noise (RBL)[1]			Ambient Noise Level ($L_{Aeq(15min)}$)[1]			Representative NCA

Notes:
1. RBL and LAeq noise levels determined with reference to NPfI procedures
2. Day is 7.00am to 6.00pm; Eve (evening) is 6.00pm to 10.00pm; Ngt (night) is 10.00pm to 7.00am
3. Monitoring conducted for the M12 EIS and adopted in the Project EIS
4. Background noise estimates provided in the EIS with reference to AS1055 and NPfI
5. Background noise estimates with reference to AS1055 and NPfI

4 Construction noise and vibration objectives

Construction noise and vibration objectives are detailed in the CNVMP. A summary of the objectives as applicable to the pipeline worksite is provided in Table 4.1.

Table 4.1: Summary of construction noise and vibration objectives

Impact	Relevant guideline	Construction noise/ vibration objective
Airborne noise	NSW Interim Construction Noise Guideline (ICNG) [5] CNVS [1]	Construction noise management levels (NMLs) for residential receivers are based on long-term noise logging conducted on behalf of TfNSW to quantify ambient noise levels for the EIS [2]. During standard construction hours, a highly affected noise objective of $L_{Aeq(15min)}$ 75dB(A) applies at all residential receivers. The NMLs for 'other' sensitive receivers are from the ICNG, as reported in Section 2.2 of the CNVS. Receivers are considered 'noise affected' where construction noise levels are greater than the noise management levels identified in Table B.1 of APPENDIX B. Where construction activities are tonal or impulsive in nature and are described in the ICNG as being particularly annoying, a +5dB(A) correction must be added to the activity noise. Construction related activities that could exceed the NMLs shall be identified and managed in accordance with the noise and mitigation and management measures set out in Section 9.
Sleep disturbance	Noise Policy for Industry (EPA 2017) [6] CNVS [1]	Initial screening level • L_{AFmax} ≤ 55 dB(A) or RBL + 15 dB (whichever is greater) Where noise events are found to exceed the initial screening level, further analysis will be made to identify: • the likely number of events that might occur during the night assessment period, and • Whether events exceed an 'awakening reaction' level of 55 dB(A) L_{AFmax} (internal) that equates to NML of 65 dB(A) externally (assuming open windows).
Ground-borne noise	NSW Interim Construction Noise Guideline (ICNG) [5] CNVS [1]	Receivers are considered 'ground-borne noise affected' where construction noise levels are greater than the noise management levels identified in Table B.2 of APPENDIX B and where ground-borne noise is greater than internal noise levels from airborne noise ingress.
Construction traffic	ICNG refers to the NSW Road Noise Policy (RNP) [7] CNVS [1]	Construction traffic impact initial screening test: • Traffic noise levels increase ≤ 2 dB(A) because of construction traffic Where traffic noise levels increase by more than 2 dB(A): • Freeway/arterial/sub-arterial road - 60 dB $L_{Aeq(15hour)}$ day and 55 dB $L_{Aeq(9hour)}$ night • Existing local road - 55 dB $L_{Aeq(1hour)}$ day and 50 dB $L_{Aeq(1hour)}$ night

Impact	Relevant guideline	Construction noise/ vibration objective
Vibration – disturbance to building occupants	NSW 'Environmental Noise Management Assessing Vibration: A Technical Guideline' (AVTG) [8] CNVS [1]	To assess the potential for vibration impact on human comfort, an initial screening test will be done based on peak velocity units, as this metric is also used for the cosmetic damage vibration assessment. The initial screening test values are: • Critical areas - 0.28 mm/s (day or night) • Residential buildings - 0.56 mm/s (15h day); 0.40 mm/s (9h night) • Offices, schools, educational institutions and places of worship - 1.10 mm/s (day or night) • Workshops - 2.20 mm/s (day or night). If the predicted vibration exceeds the initial screening test, the total estimated Vibration Dose Value (i.e. eVDV) will be determined based on the level and duration of the vibration event causing exceedance as detailed in Section 2.3.1 of the CNVS and Section 2.4 of the AVTG.
Vibration – structural damage to buildings	British Standard BS 7385-2:1993 'Evaluation and measurement for vibration in buildings'[12] German Standard DIN 4150-3: 2016-12, Structural vibration - Effects of vibration on structures [13] CNVS [1]	A conservative vibration damage screening level (peak component particle velocity) per receiver type is detailed in Section 2.4 of the CNVS and outlined below: • Reinforced or framed structures: 25.0 mm/s • Unreinforced or light framed structures: 7.5 mm/s. Heritage buildings and structures found to be structurally unsound (following inspection) would adopt a more conservative vibration damage screening level (peak component particle velocity): • Heritage structures (structurally unsound): 2.5 mm/s (initial screening level). Where the predicted and/or measured vibration is greater than shown above, a more detailed analysis of the building structure, vibration source, dominant frequencies and dynamic characteristics of the structure will be completed to determine the applicable vibration limit.

5 Construction airborne noise impacts

5.1 Noise prediction methodology

Assessment of airborne noise impacts from the construction works were determined by predicting noise levels using a Cadna-A computer noise model developed for this Project. The Cadna-A noise model incorporates ground elevation contours, building heights, the built environment, and atmospheric conditions to predict the contribution of each noise source at identified sensitive receiver locations and allows for the prediction of the total noise from a worksite for the various construction stages.

Key details regarding the construction work locations, the likely plant and equipment, and hours of operation were informed by the Design and Construction Teams.

A summary of the noise model input parameters is detailed in Table 5.1.

Table 5.1: Summary of noise modelling parameters

Parameters	Inputs
Calculation method	ISO 9613-2:1996 implementing quality standard ISO 17534-1:2015
Location of noise sources	0.5m to 2m above the ground depending on the equipment or plant in use
Height of receivers	1.5m above ground level to represent 1.5m above ground floor level Additional 3m height for every additional floor assessed (i.e. 4.5m above ground for first floor, 7.5m for second floor etc.)
Ground topography	1m digital ground contours
Sound power levels of plant and equipment	Detailed in Table C.1 in APPENDIX C. Activity timing, number of plant and hours of operation also in Table C1.
Ground absorption	0.5
Noise barriers and screening	Noise barriers (e.g. site compound hoardings) included. Existing buildings providing shielding to receivers has been included in the noise model.
Acoustic sheds/ enclosures	Not considered in the assessment as they are not being built.
Noise source corrections	Noise source penalty corrections have been applied in accordance with Section 4.5 of the NSW Interim Construction Noise Guideline (ICNG).

The noise predictions in this report represent a realistic worst-case scenario when construction occurs at a works location close to residences and other sensitive receivers. At each receiver, noise levels will vary during the construction period based on:

- the position of equipment within the worksite and distance to the receiver;
- the construction activities being undertaken;
- the noise levels of plant items and equipment
- temporary noise barriers/ construction hoarding.

Predicted noise levels presented in APPENDIX D are the maximum noise levels for each building. Actual noise levels will often be less than the predicted levels presented in this report.

5.2 Predicted noise levels

Noise impacts during construction works have been predicted and compared to the noise management levels (NMLs). A receiver is considered construction noise affected when the predicted construction noise level is above the NML.

Table 5.3 presents a summary of the number of residential receivers likely to be noise affected by the proposed activities. The tables are colour coded to indicate how much the predicted noise level is above the NML and the corresponding perceived noise impact, based on the CNVS, as noted in Table 5.2.

Table 5.2: Key to the predicted construction noise results tables

Assessment	Time of day	Key			
$L_{Aeq(15min)}$	Standard hours[1]	1-10 dB(A) over NML (light blue) Clearly audible	11-20 dB(A) over NML (mid blue) Moderately intrusive	>20 dB(A) above NML (dark blue) Highly intrusive	
	Outside standard hours	1-5 dB(A) above NML (green)	6-15 dB(A) above NML (yellow)	16-25 dB(A) above NML (orange)	>25 dB(A) above NML (purple)
Sleep disturbance	Night only	L_{Amax} above 55 dB(A) or RBL plus 15 dB, whichever is the greater (yellow)		L_{Amax} above 65 dB(A) (purple)	

Table 5.3 summarises the number of construction noise affected residential receivers (i.e. receivers where predicted L_{Aeq} noise levels construction works are above the NML) and the likely perceived noise impact. Detailed predicted L_{Aeq} noise levels for all receivers (including other non-residential noise sensitive receivers) in each NCA are presented in Table D.1 of APPENDIX D.

The impacts presented below and in Table D.1 are the maximum predicted noise levels for each activity based on the plant and equipment operating in the closest location relative to the receiver, for the works along the pipeline alignment. The cumulative impact from both construction of the AWRC and pipeline occurring concurrently is unlikely to add more than 2 dB(A) to the overall airborne construction noise level. To allow for changes to the construction program, cumulative impacts from the worksites can be reviewed in the Appendix D spreadsheet on a case-by-case basis, based on the activities likely to be occurring concurrently.

Table 5.3: Number of receiver buildings over the airborne noise management level (all NCAs) – residential receiver buildings

Construction scenario[1]	Highly noise affected > 75 dB(A)[2]	Day (standard hours)			Day (OOH)				Evening				Night			
	L_{Aeq}	L_{Aeq}			L_{Aeq}				L_{Aeq}				L_{Aeq}			
	Standard hours	1 – 10 dB(A)	11 – 20 dB(A)	> 20 dB(A)	1 – 5 dB(A)	6 – 15 dB(A)	16 – 25 dB(A)	> 25 dB(A)	1 – 5 dB(A)	6 – 15 dB(A)	16 – 25 dB(A)	> 25 dB(A)	1 – 5 dB(A)	6 – 15 dB(A)	16 – 25 dB(A)	> 25 dB(A)
Site compound (site establishment)	4	199	31	0	-[3]	-[3]	-[3]	-[3]	-[3]	-[3]	-[3]	-[3]	-[3]	-[3]	-[3]	-[3]
Site compound (compound operation)	1	127	13	0	177	124	14	0	324	236	41	2	759	470	108	12
Potholing & Early works	1591	4048	1526	73	2969	4010	1510	49	2300	5223	2468	396	1778	5268	3682	1360
Site Establishment and Mobilisation	556	1611	736	31	1451	1604	720	19	0	0	0	0	0	0	0	0
Excavation	1883	4748	1775	87	2743	4689	1751	63	2137	5449	2871	481	1353	4905	4386	1561
Pipe Installation	274	1248	740	6	1159	1246	716	4	1554	1798	939	216	2493	2608	1165	683
Trenchless Installation	2	71	15	0	92	72	13	0	169	134	31	1	377	258	64	12
Landscaping and Rehabilitation	158	1064	684	4	1012	1059	668	2	0	0	0	0	2068	2284	1004	623

Note: Construction noise level cells are shaded based upon the predicted worst case NML exceedance in accordance with the key presented in Table 5.2

1. For detail, refer to Table C1 in APPENDIX C
2. Highly noise affected applies to residential receivers, as per the ICNG.
3. This activity is not scheduled for outside standard construction hours.

5.2.1 Standard construction hours

The results summarised in Table 5.3 show that noise-sensitive residential receivers may be construction noise affected for all scenarios during standard construction hours. Other non-residential noise sensitive receivers have also been identified as construction noise affected in Table D.1 of APPENDIX D.

Mitigation and management measures to reduce construction noise levels towards the standard construction hours NML are summarised in Section 9.

5.2.2 Out of hours work

The results summarised in Table 5.3 show that there will be construction noise affected residential receivers where works are undertaken outside standard construction hours. Other non-residential noise sensitive receivers in Table D.1 of APPENDIX D would be identified as construction noise affected where they are in use during the out of hours construction works.

Mitigation and management measures to reduce construction noise levels towards the out-of-hours hours NML are summarised in Section 9.

5.2.3 Potential duration of impact

The results summarised in Table 5.3 outline the number of unique residential receiver buildings which, at some point during the construction of the Project, may experience construction noise above the NML. The magnitude of the impact is based on the works being concentrated at the reasonable worst-case location near each receiver.

However, works would not remain at the same location for the duration of the Project's construction. Target advance rates vary along the length of the Project and range between 10m and 63m per day for trenching, and 5-10m for microtunnelling/underboring.

To calculate the potential duration of impact, the following assumptions were adopted:

- One work crew has been conservatively assumed to operate at a time in one section, as this would result in a more conservative estimate for the potential duration of impact.
    - A 'section' is defined as a portion of the Project alignment equal to the distance covered in one day, with reference to the target advance rates. Sections would be approximately 10-63m long for trenching and 5-10m long for microtunnelling/underboring.
    - It is noted that an additional work crews may generate more noise which could potentially result in a cumulative impact. However, the additional crew would need to generate the same amount of noise at the same worst-case location to vary the result by +3 dB(A). Once the spacing between concurrent work crews is considered, it is more likely that additional works would vary the result by a marginal (2 dB(A)) or nil amount.

    - Cumulative impacts will be assessed further using Gatewave (detailed in Section 9.5.1) once the exact location and duration of works at each location along the Project's alignment is confirmed.
- Works occur at the worst-case location within each section of the pipeline alignment.
- A day is considered impacted if at least 15 minutes of an assessed period during that day is predicted to be above the NML. In reality, noise impacts would not be sustained for the entire day (or period of the day) as plant/equipment move around the site and the intensity of works varies.

Table 5.4 summarises the highest duration and Note:

As detailed in Section 5.2.3, the estimated duration of impact assumes one work crew operating in a 5-63m section of the Project alignment at any given time. Activities may be conducted by multiple work crews in parallel.

Table 5.5 summarises the median duration. Note that the durations listed do not necessarily show the number of consecutive impacted days. Variations in actual advance rates and the number of work crews may change the number of impacted days, and this will be assessed further using Gatewave (detailed in Section 9.5.1).

Table 5.4: Highest duration (number of days) the most affected residential receiver experiences construction noise above the noise management level

Activity	Timing of activity	NML Day				NML Day (OOH)				NML Evening				NML Night			
		1 to 10	11 to 20	> 20	>75dBA	1 to 5	6 to 15	16 to 25	> 25	1 to 5	6 to 15	16 to 25	> 25	1 to 5	6 to 15	16 to 25	> 25
Excavation	45 weeks	129	62	24	54	135	129	62	30	188	169	89	54	253	220	129	71
Pipe Installation	45 weeks	35	10	2	3	36	35	10	3	52	42	19	6	73	55	35	10
Trenchless Installation	40 weeks	26	26	0	26	53	26	26	4	62	53	26	26	62	62	26	26
Landscaping and Rehabilitation	17 weeks	32	27	0	27	54	32	28	5	-	-	-	-	102	62	29	28

Note:

As detailed in Section 5.2.3, the estimated duration of impact assumes one work crew operating in a 5-63m section of the Project alignment at any given time. Activities may be conducted by multiple work crews in parallel.

Table 5.5: Median duration (number of days) a residential receiver experiences construction noise above the noise management level

Activity	Timing of activity	NML Day				NML Day (OOH)				NML Evening				NML Night			
		1 to 10	11 to 20	> 20	>75dBA	1 to 5	6 to 15	16 to 25	> 25	1 to 5	6 to 15	16 to 25	> 25	1 to 5	6 to 15	16 to 25	> 25
Excavation	45 weeks	10	3	3	5	16	10	4	4	27	18	5	5	42	35	9	5
Pipe Installation	45 weeks	3	2	2	2	3	3	3	2	4	3	3	2	6	5	3	3
Trenchless Installation	40 weeks	8	8	0	15	8	8	8	4	8	8	8	8	9	8	8	8
Landscaping and Rehabilitation	17 weeks	4	2	0	2	3	4	2	1	-	-	-	-	5	4	4	2

Note:

As detailed in Section 5.2.3, the estimated duration of impact assumes one work crew operating in a 5-63m section of the Project alignment at any given time. Activities may be conducted by multiple work crews in parallel.

5.2.4 Sleep disturbance

The results summarised in Table 5.6 show that there are residential receivers expected to experience construction noise levels above the sleep disturbance target levels by the works undertaken for the pipeline installation activities during the night period.

Table 5.6: Residential receivers expected to experience construction noise levels above the sleep disturbance target during each construction scenario

Construction scenario	Night	
	L_{Amax}	
	Screening	Awakening
Site compound (compound operation)	594	70
Potholing & Early works	4815	3625
Excavation	5614	5455
Pipe Installation	2804	2193
Trenchless Installation	170	55
Landscaping and Rehabilitiation	2822	2197

Mitigation and management measures to reduce construction noise levels towards the sleep disturbance targets are summarised in Section 9.

6 Ground-borne noise impacts

Ground-borne noise impacts may arise when construction works generate sufficient vibration to excite a structure and cause a higher level of regenerated noise within a building compared to the airborne noise. Potential vibration generated to receivers is dependent on separation distances, the intervening soil and rock strata, dominant frequencies of vibration, and the receiver structure.

The night is the most sensitive period for residential receivers, where a 35 dB(A) Ground-borne Noise Management Level (GNML) applies. Additionally, ground-borne noise must be above the internal noise level due to airborne noise ingress. Residences are assumed to have a 10 dB(A) façade loss (i.e. considering open windows), consistent with the approach adopted in the CNVMP for setting sleep disturbance targets.

6.1 Trenchless excavation

The Project will require trenchless excavation, such as horizontal directional drilling (HDD) and pipe jacking/microtunnelling, for pipeline sections where surface excavation cannot be carried out.

Table 6.1 summarises the diameters of the cuts needed for sections of the pipeline where trenchless excavation is required.

Table 6.1: Trenchless excavation pipe and cut sizes

Crossing	Pipe diameter, mm	Cut size, mm
Badgerys Creek	1000	1246
Farm Dam	1000	1246
Jerrys Creek	900	1118
Nepean River	900	1118
M7 Motorway	450	558
Cowpastrure Road	450	558
Cabramatta Rail	400	508
Hume Highway/Prospect Creek	450	558
Elizabeth Drive	450	558
Upper canal	450	558
Monash / Montgromery	450	558
Willow Bank	450	558
Northern Road	1200	1368
Jemena	600	768

Ground-borne noise has been predicted to noise-sensitive receivers near the trenchless excavation sections of the pipeline, considering the cut sizes in Table 6.1. Approximately 13 residential receivers may experience ground-borne noise above the 35 dB(A) GNML during the night from trenchless works. However, concurrent internal noise levers from airborne noise ingress are predicted to be more than

10 dB (i.e. between 11 dB and 27 dB) higher than the ground-borne noise inside these receiver buildings. As a result, ground-borne noise from trenchless excavation would not change the overall noise impacts to receivers.

6.2 Trench excavation

A 35 tonne excavator with rockhammer may be required during excavation of pipeline sections where surface works are proposed. Ground-borne noise has been predicted to noise sensitive receivers near the pipeline sections where trenches will be excavated.

Two receivers are predicted to experience ground-borne noise higher than the GNML and the concurrent airborne noise inside the receiver building:

- 47 Willowbank Crescent, Canley Vale – approximately 1m from the works
- 18/25 Bartley Street, Canley Vale – approximately 1m from the works

As both of these receivers are in close proximity to the works, additional mitigation measures applicable to these receivers would not differ to those that would be required to address residual airborne noise impacts. In the case of addresses listed above, where rockhammering may occur approximately 1m from the residence, airborne noise would be more than 25 dB(A) above the Night NML, ground-borne noise would be more than 20 dB(A) above the GNML, and the following additional mitigation measures (Section 9.4) would apply:

- Airborne noise (Figure 10): PN, V, SN, AA, RP, DR
- Ground-borne noise (Figure 11): PN, V, SN, AA, RP, DR

The mitigation measures to address ground-borne noise are the same as those required to address airborne noise. As a result, ground-borne noise from trench excavation would not change the management of noise impacts to receivers.

7 Construction vibration impacts

7.1 Vibration assessment methodology

7.1.1 Vibration intensive activities

From the plant and equipment listed in APPENDIX C, the pipeline installation activities with dominant vibration generating plant and equipment are shown in Table 7.1.

Table 7.1: Pipeline installation activities vibration intensive activities and plant items

Activity/ work area	Aspect	Vibration intensive plant
Site Compounds	Site establishment	Vibratory roller
	Compound operation	Nil
Brine/ treated water pipelines	Potholing and early works	Jackhammer
	Site establishment and mobilisation	Vibratory roller
	Excavation	Excavator 20t with rockhammer
	Pipe installation	Smooth drum roller
	Trenchless installation	HDD drill rig
	Landscaping and rehabilitation	Plate compactor

Potential vibration generated to receivers is dependent on separation distances, the intervening soil and rock strata, dominant frequencies of vibration, and the receiver structure. The recommended minimum working distances for vibration intensive plant in Table 7.2 are taken from a database of vibration levels measured at various sites or obtained from other sources (e.g. BS5228-2:2009). They are not specific to the Project works as final vibration levels are dependent on many factors including the actual plant used, its operation and the intervening geology between the activity and the receiver.

Potential impacts are identified by determining the buildings/ structures likely to be within the recommended minimum working distances, taking into consideration the vibration intensive plant in use, location of works and distance to nearest affected receiver buildings/ structures.

7.1.2 Minimum working distances for vibration intensive plant

Site specific minimum working distances for vibration significant plant items must be measured on site where plant and equipment is likely to operate close to or within the recommended minimum working distances for cosmetic damage (Table 7.2).

Table 7.2: Recommended minimum working distances (m) for managing vibration impact based on screening criteria

Vibration sensitive receiver	Minimum working distances for vibration intensive plant, m					
	Jackhammer	Vibratory roller	Excavator 20t with rockhammer	Smooth drum roller	HDD drill rig	Plate compactor
Structural damage to buildings						
Reinforced or frame structures[1]	5	5	5	5	5	5
Unreinforced or light framed structures[1, 2]	5	5	5	5	5	5
Structurally unsound heritage structures[1, 2]	5	15	10	10	10	5
Disturbance to building occupants						
Critical areas[4,7]	25	105	40	25	30	20
Residences – Day	15	55	25	15	20	10
Residences – Night	20	75	30	20	20	15
Offices[6,7]	10	30	20	10	10	5
Workshops[7]	5	15	15	10	10	5

Notes: 1. Initial screening test criteria reduced by 50% due to potential dynamic magnification in accordance with BS7385.

2. In accordance with CNVMP, a site inspection should determine whether a heritage structure is structurally unsound.

3. Minimum working distances are in 5m increments only to account for the intrinsic uncertainty of this screening method. Jackhammers/ plate compactors are likely to have minimum working distances smaller than 5 m.

4. Examples include hospital operating theatres and precision laboratories where sensitive operations are occurring.

5. Daytime is 7 am to 10 pm; Night-time is 10 pm to 7am.

6. Examples include offices, schools, educational institutions, and place of worship.

7. Applicable when in use.

7.2 Vibration assessment

The numbers of buildings which are close to or within the minimum working distances or vibration impact are shown in Table 7.3. More detailed results are presented in APPENDIX E.

Table 7.3: Number of buildings within minimum working distances for vibration impact

Worksite	Construction activity	Vibration intensive plant	Buildings within Structural Damage MWD[1]			Buildings within human annoyance MWD[2]				
			Reinforced structures	Unreinforced structures	Heritage screening	Critical areas[3,6]	Residence Day[4]	Residence Night[4]	Offices[5,6]	Workshop[6]
Site Compounds	Site establishment	Vibratory roller	38	38	2	0	1571	2038	34	1
Pipeline	Potholing and early works	Jackhammer	25	25	0	0	389	673	9	0
	Site establishment and mobilisation	Vibratory roller	25	25	1	0	1749	2281	45	0
	Excavation	Excavator 20t with rockhammer	25	25	1	0	905	1081	27	0
	Pipe installation	Smooth drum roller	25	25	1	0	385	668	9	0
	Trenchless installation	HDD drill rig	1	1	0	0	23	23	2	0
	Landscaping and rehabilitation	Plate compactor	25	25	0	0	144	389	4	0

Notes:

1. Initial screening test criteria reduced by 50% due to potential dynamic magnification in accordance with BS7385.
2. In accordance with CNVMP, a site inspection should determine whether a heritage structure is structurally unsound.
3. Examples include hospital operating theatres and precision laboratories where sensitive operations are occurring.
4. Daytime is 7 am to 10 pm; Night-time is 10 pm to 7am.
5. Examples include offices, schools, educational institutions, and place of worship.
6. Applicable when in use.

7.2.1 Structural damage

During the vibration intensive works for the pipeline installation activities there are 40 vibration sensitive receivers, which includes Upper Canal, identified to be within the recommended minimum working distance for structural damage. Each property owner will be offered a property condition survey prior to works commencing. The list of receivers within the minimum working distance for structural damage is shown in APPENDIX E.

The pipeline alignment is large. The vibration impact on the buildings listed above will depend on the specific location the plant is operating within the worksite. That is, vibration intensive plant can operate in some areas of the site without impacting on the surrounding structures, provided it is operating outside the minimum working distances.

Generally, where plant is required to operate within minimum working distances, works will be paused and the construction methodology will be revised to ensure the vibration intensive plant only operates outside the minimum working distance. Alternatively, vibration monitoring is recommended to determine site specific minimum working distances to verify that vibration levels achieve compliance with the structural damage objectives as outlined in Section 4.

Where plant is required to operate within minimum working distances, vibration monitoring is recommended to determine site specific minimum working distances and/or verify that vibration levels achieve compliance with the structural damage objectives, as outlined in Section 9.6.2.

If the monitoring above identifies that vibration is likely to exceed the structural damage objectives, a different construction method with lower source vibration levels will be identified and implemented.

Vibration monitoring will be carried out during the works to verify that vibration levels achieve compliance with the structural damage objectives, as outlined in Section 9.6.2.

7.2.2 Heritage structures

No heritage structures are identified within the minimum working distance for the conservative cosmetic damage screening limit for ‘structurally unsound’ structures.

7.2.3 Upper Canal

Works may occur within the Upper Canal easement near the Cecil Park Model Flying Club. According to the Guideline for development adjacent to the Upper Canal and Warragamba pipelines, the easement of the pipeline will be used to assess vibration minimum working distance. On this basis, the Upper Canal system is within the minimum working distance.

Consultation with WaterNSW will be conducted to verify the location(s) of other sensitive components of Upper Canal (such as buried assets) and seek feedback on the proposed construction methodology.

7.2.4 Human annoyance

The Assessing Vibration: a technical guideline [6] notes that inside dwellings, adverse comments often arise when occupants can perceive (feel) vibration, particularly when the vibration arises from a source located outside their home (or outside their control) and assume that the vibration has the potential to damage their building or contents.

However, it is noted that vibration levels required to cause minor cosmetic damage are typically 10 times higher than levels that will cause disturbance to building occupants. Many building occupants assume that building damage is occurring when they feel vibration or observe rattling of loose objects. However, the level of vibration at which people perceive vibration or at which loose objects may rattle is far lower than vibration levels that can cause damage to structures.

At properties near the worksite, it is possible that the nearest receivers will be able to feel vibration levels when vibration-generating equipment is being utilised. It is important to note that human comfort levels are much lower than vibration levels likely to result in property damage and people therefore may be disturbed by vibration with no potential to result in property damage.

The above assessment is based on vibration-generating equipment being operating constantly at the closest location to nearby receivers. When vibration-generating equipment operates further from the closest point, the predicted vibration levels will reduce along with the probability of adverse comment.

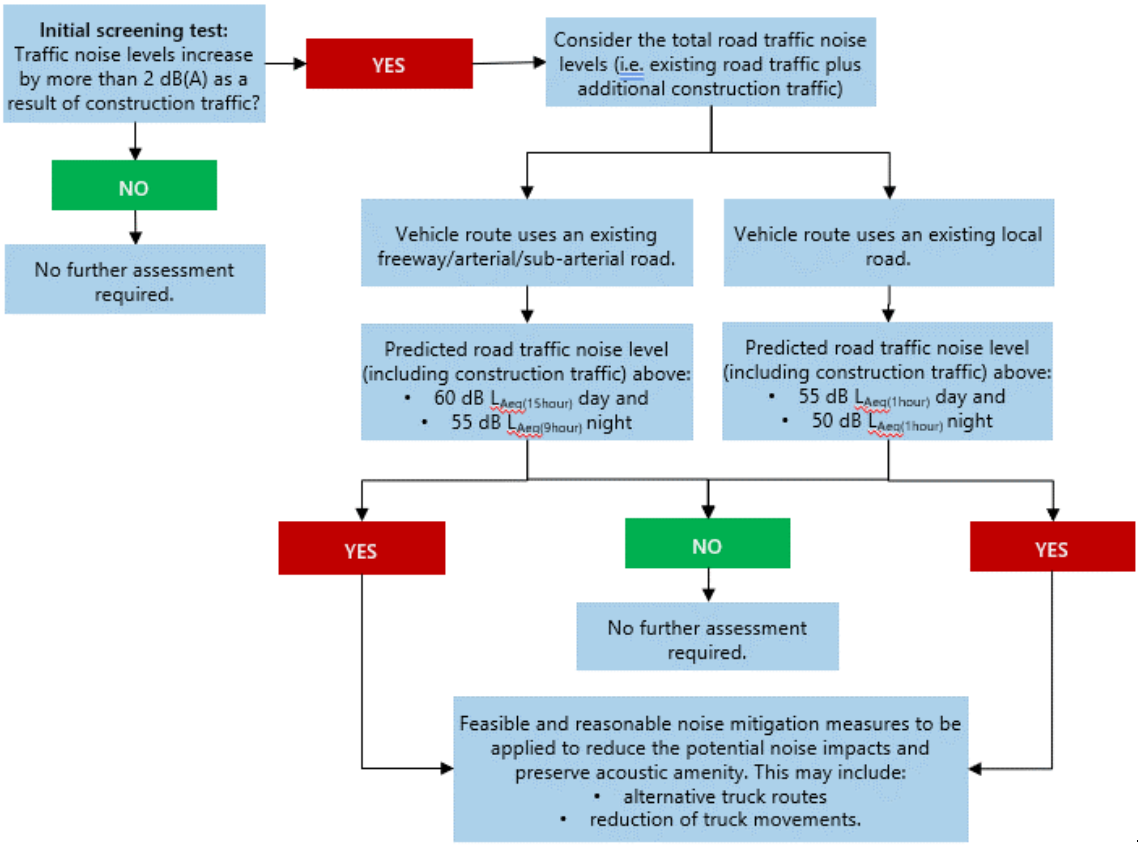

Attended vibration measurements are proposed to be carried out in accordance with the CNVMP and in response to vibration complaints. If measurements results indicate events above the vibration objectives for human annoyance, vibration control and management measures will be provided to reduce vibration impact (see Section 9).

8 Construction traffic noise assessment

8.1 Traffic noise assessment methodology

Construction related traffic has the potential to temporarily increase road traffic noise levels at receivers which are adjacent to or near construction haulage routes. The construction road traffic noise assessment procedure is outlined in Figure 9.

Figure 9: Construction Road Traffic Noise assessment procedure

The potential impact of construction road traffic noise to nearby residential receivers has been estimated using the United Kingdom Department of Environment's 'Calculation of Road Traffic Noise' (1988) method. The method uses the average 1-hour traffic volume for the 'assessment period' (i.e. day or night) to predict the $L_{10,\ 1hour}$ noise levels. A correction of -3dB(A) is applied to obtain the $L_{eq,\ 1\ hour}$ noise levels which equate to the L_{Aeq} noise levels for the 'assessment period'.

Details of Projected heavy vehicle movements associated with the construction works were provided by John Holland (See Table C.1 in APPENDIX C).

Table 8.1: Construction generated traffic (refer to Table C.1)

Worksite	Activity/ Work Area	Day (7am to 10pm)		Night (10pm to 7am)	
		Heavy vehicles	Light vehicles	Heavy vehicles	Light vehicles
Site Compounds	Site establishment and compound operation	55	3	-	-
Brine/ treated water pipelines	Potholing and early works	1	3	1	3
	Site establishment and mobilisation	10	3	-	-
	Excavation	1	3	1	3
	Pipe installation	5	3	5	3
	Trenchless installation	5	3	1	3
	Landscaping and rehabilitation	7	-	7	-

As the proposed heavy vehicle routes have not substantially changed from the traffic routes assessed in the EIS Technical Paper 1: Noise and vibration [3], the assessment is based on the impacts presented in the EIS. Additionally, construction traffic generated during the construction stages assessed in this CNVIS will be during standard construction hours. There are typically no heavy vehicles after 10 pm, except for oversized deliveries or where OOHW is triggered by an ROL.

8.2 Predicted construction traffic noise

The EIS, Submissions Report and Amendment Report summarises the predicted construction traffic noise impacts during day and night periods. Predicted values for the noise contribution of the construction generated traffic on local roads were calculated using the values in Table 8.1. The minimum offset of receivers from the road that still complies with the RNP traffic noise criteria set out in Table 4.1 are as follows:

- Site Compound Traffic Day – 4m receiver offset from road
- Pipeline Traffic Day – 1m receiver offset from road
- Pipeline Traffic Night – 3m receiver offset from road

Given that typically the offset of receivers from the road is 5m-8m in urban areas and larger in rural areas, the construction generated traffic is unlikely to exceed the RNP traffic noise criteria.

Construction traffic noise impacts will be managed by generally limiting heavy vehicle movements to standard construction hours. Outside standard construction hours, heavy vehicles would be limited before 10 pm as much as practical, especially where traffic conditions inhibit the use of the primary egress route (see Section 2.1.3.). During the construction stages assessed in this CNVIS heavy vehicles during the evening period (6:00 pm to 10:00 pm) are likely to be less than 4 per hour.

There may be limited heavy vehicle movement after 10 pm when OOHW is triggered by ROL or similar (e.g. oversized deliveries). On this basis it is anticipated that construction generated traffic impacts will

be consistent with the EIS predicted road traffic noise impacts, that is less than 2 dB(A) increase on all proposed heavy vehicle routes.

Construction traffic noise will also be minimised by incorporating measures such as considerate driving, loading trucks from low heights to avoid loud load impact noise, and unloading to avoid tail gate slams. These measures will be relayed to the site team via toolbox talks and the site induction.

9 Mitigation and management measures

9.1 High noise impact activities

9.1.1 Standard respite periods (CoA E41 and EPL)

Highly noise intensive works are defined in the Conditions of Approval as works which are defined as annoying under the ICNG, including:

a) use of power saws, such as used for cutting timber, rail lines, masonry, road pavement or steel work;

b) grinding metal, concrete or masonry;

c) rock drilling;

d) line drilling;

e) vibratory rolling;

f) bitumen milling or profiling;

g) jackhammering, rock hammering or rock breaking;

h) rail tamping and regulating; and

i) impact piling.

EPL 21800 defines *High Noise Impact Activities and Works as construction works which exceed the applicable NML at sensitive receiver locations and are:*

- *Identified as particularly annoying in section 4.5 of the ICNG [5]; and/or,*
- *Works identified as 'Highly Noise Intensive Works' in a planning approval for the activities in this licence; and/or,*
- *Any other activity identified by the EPA, and advised to the licensee, following an assessment of the character of the noise emitted by the activity based on the Noise Policy for Industry, Fact Sheet C considerations [6].*

Activities during potholing, site establishment, excavation, and pipe installation works include some of the activities listed in the ICNG. Respite will be provided by limiting activities as follows to satisfy CoA E41 and the EPL Condition L4.2:

- Between the hours of 8:00am to 6:00pm Monday to Friday
- Between the hours of 8:00am to 1:00pm Saturday, and

- In continuous blocks not exceeding three hours each with a minimum respite from those activities or works of not less than one hour.

For the purposes of this requirement 'continuous' includes any period during which there is less than one-hour respite between ceasing and recommencing any of the work that is subject to this requirement.

Respite periods will not be provided where verification monitoring finds highly noise intensive works do not exceed the applicable NML.

9.2 Consultation with affected receivers

CoA E48 and E49 require consultation with noise and/or vibration affected sensitive land users to assist in determining site-specific mitigation measures.

Consultation has been carried out with receivers identified as being +5dB above RBL. The consultation piece is included as APPENDIX F. Further consultation will be carried out with sensitive receivers closer to the time of impact to determine sensitive time periods which will help to identify when is most appropriate to incorporate respite periods. This consultation will be recorded and included to future revisions of the CNVIS.

Mitigation measures which have been identified may include managing noise impact and appropriate respite periods for out-of-hours works; scheduling high noise impact works around sensitive periods where feasible and reasonable; alternative methods of compaction to reduce vibration, substitution of plant and equipment to ones with a lower sound power level, offers of movie or dinner vouchers; alternative accommodation offers. Consultation is also being undertaken to understand stakeholders' noise and vibration expectations and preferences for timing of high impact noise respite. This is consistent with requirements in CoA Conditions E55.

A summary of the consultation program is provided below:

- Consultation with relevant community members on construction works, including site establishment, earthworks and pipe installation works.
    - Consultation with noise affected receivers identified in APPENDIX D to ensure additional management measures are provided (if required, refer to Section 9.4).
    - Consultation with potentially noise and/ or vibration affected community, religious, educational institutions and noise and vibration-sensitive businesses and critical working areas (such as theatres, laboratories and operating theatres) to satisfy CoA E46 and ensure events resulting in noise levels above the NMLs are not timetabled within sensitive periods or make alternative arrangements where this cannot be avoided.
    - Consultation with community that are construction noise and/or vibration affected on a regular basis on respite during out-of-hours work. To satisfy CoA E55, this consultation will include:

  - a progressive schedule for periods of likely out-of-hours work;
  - a description of the potential work, location and duration of the out-of-hours work;
  - the noise characteristics and likely noise levels of the work; and
  - likely mitigation and management measures which aim to achieve the relevant NMLs under CoA E44, including the circumstances of when respite or relocation offers will be available and details about how the affected community can access these offers (see Section 9.4 and 9.3).

- Consultation with the owners of properties identified as at risk of exceeding the screening criteria for cosmetic damage, to satisfy Condition E49, will receive the following:
  - Property condition survey offer letter,
  - Community updates as shaft excavation progresses and the expected vibration impacts,
  - Where requested, specific meetings with stakeholders.

Consultation will continue and mitigation measures implemented as applicable to the stage of work.

9.3 Noise and vibration control and management measures

Noise and vibration control and management measures to reduce potential noise impacts will be implemented during the construction works, where reasonable and feasible. In accordance with the ICNG and consistent with the CNVS, feasible noise mitigation measures are those work practices or measures to reduce noise that are capable of being put into practice or of being engineered and are practical to build given Project constraints such as safety and maintenance requirements. Reasonable noise mitigation measures are those feasible noise mitigation measures that are considered reasonable in the circumstances, based on a judgement that the overall noise benefits outweigh the overall adverse social economic and environmental effects, including the cost of implementing the measure. To make such a judgement, consideration is to be given to noise level impacts, duration of impacts, noise mitigation benefits, cost effectiveness of noise mitigation and community views.

Table 9.1 outlines the noise and vibration control measures that will be implemented on site during the construction works, where feasible and reasonable.

Table 9.1 Site noise control measures

Control measure	Description of the control measure	Feasible mitigation test	Deemed feasible?	Reasonable mitigation test	Deemed reasonable?	Adopted?	Justification and commentary
At source control measures							
Site planning and layout	Locate noise-generating activities away from sensitive receivers, where practicable. Plan traffic flow, parking, loading/unloading, and other vehicle movements to keep vehicles away from sensitive receivers where possible and to minimise reversing movements.	The site has been designed and constructed to include this (see Figure C1).	Yes	- Potential benefit of 5-10 dB(A). - Sufficient noise reduction could be achieved at enough receivers. - Deemed to be cost effective. - Outweighs the identified social, economic and environmental effects.	Yes	Yes	Fixed noise sources such as the water treatment plant is located away from more sensitive receivers. Traffic flow is one-directional.
Noise control kits	Plant that is brought to site for works should meet the sound power limits identified in Table C1 of this assessment. Where plant are above limits then the plant may require installation of 'noise control kits' to comply with the noise limits in this assessment. Such 'noise control kits' comprise: • high performance 'residential-grade' exhaust mufflers, • additional engine cowling / enclosure lined inside with sound absorbent industrial-grade foam, and • air intake and discharge silencers / louvres.	This measure could be feasibly implemented. Subject to availability for each equipment item.	Yes	- Potential benefit of 5-10 dB(A). - Sufficient noise reduction could be achieved at enough receivers. - Deemed to be cost effective. - Outweighs the identified social, economic and environmental effects. - Deemed to be cost effective. - Outweighs the identified social, economic and environmental effects.	Yes	Yes, subject to noise testing on site	The need to fit 'noise control kits' onto the identified plant, will be confirmed once each plant item is tested prior to its regular use on site, or alternative the plant will be swapped for lower noise plant. (see Table C2)
Limit equipment in use	Only the equipment necessary during each stage of the works will be used.	This measure could be feasibly implemented.	Yes	- Routine measure for Project team. - Sufficient noise reduction could be achieved at enough receivers. - Cost effective.	Yes	Yes	Excess equipment will be avoided where it is not needed for the works and where it is reasonable to do without it. (see Table C1 for specific limitations)
Timing of equipment in use	Where practicable, activities and plant will be scheduled/limited as outlined in Table C1 and C2 (APPENDIX C) of this assessment For example, for OOHW - During acoustic shed construction under ROL, limit all high noise activities (jackhammer, power tools etc) to standard hours, where practicable or to before midnight where the works cannot be undertaken during standard hours.	This measure is not feasible for all works as there is limited time for works to be completed under ROL (or similar).	Not for all works	- Sufficient noise reduction could be achieved at enough receivers and cost effective etc, - Note that some of the OOHW are unavoidable due to the high risk to construction personnel or public safety triggering ROL.	Not for all works	Not for all works	Where practicable, the timing of works will be managed to reduce noise levels during more sensitive periods (i.e. after 10pm and after 12am; and not before 7am). Noisy plant that supports OOHW, but does not require OOH operation (e.g. jackhammer) will be limited to standard hours use only within the worksite or off site, where practicable), providing a 5-15 dB reduction in noise levels.
Limit activity duration	Any equipment not in use shall be switched off and not left idling.	This measure could be feasibly implemented.	Yes	- Routine measure for Project team. Sufficient noise reduction could be achieved at enough receivers. - Deemed to be cost effective. - Outweighs the identified social, economic, and environmental effects.	Yes	Yes	Equipment that is not directly needed for works at a given time will be switched off.

Control measure	Description of the control measure	Feasible mitigation test	Deemed feasible?	Reasonable mitigation test	Deemed reasonable?	Adopted?	Justification and commentary
Equipment selection	Use quieter and less noise/vibration emitting construction methods where feasible and reasonable, for example use rock saw to separate shaft excavation area from existing ground where practicable, to provide a reduction in GBN and vibration; vibratory rollers can, where practicable, be operated with the vibratory mode switched off to reduce vibration impact.). Plant and equipment alternatives will be discussed and considered during Activity Method Statement (AMS) meetings which include the sub-contractor, environmental representatives from John Holland and Sydney Water.	This measure could be feasibly implemented. To be determined on a case-by-case basis.	Yes	- Sufficient noise or vibration reduction could be achieved at enough receivers. - Deemed to be cost effective. - Outweighs the identified social, economic, and environmental effects.	Yes	Yes	Project team shall review plant and equipment on a case-by-case basis and find opportunities to use items with lower noise/vibration impacts.
Alternative construction methods to reduce vibration	Alternative, less vibration generating construction methods will be reviewed where vibration significant works found to be within the site-specific minimum working distance of a structure, as determined by site vibration monitoring and/or where deemed feasible and reasonable.	This measure could be feasibly implemented. To be determined on a case-by-case basis.	Yes	- Sufficient vibration reduction could be achieved at identified structure to reduce the risk of structural damage from vibration significant works.	Yes	Yes	The use of alternative methods to reduce vibration transmission will be considered where site specific vibration assessments indicate that minimum working distances for cosmetic damage cannot be met.
Truck movements	Where practicable, avoid the use of park air brakes at night. Set up relevant traffic management measures to minimise the use of air brakes when leaving site. Air brake silencers are to be correctly installed and fully operational for any heavy vehicles (as per CNVMP). Minimise unnecessary acceleration on site and avoid vigorous slamming of truck doors. Avoid slamming of tail gates when delivering materials, as well as slamming of truck doors. Drivers will be reminded to drive responsibly during pre-start toolbox talks and during the site induction.	This measure could be feasibly implemented.	Yes	- Sufficient noise reduction could be achieved at enough receivers. - Deemed to be cost effective. - Outweighs the identified social, economic, and environmental effects.	Yes	Yes	Drivers will be reminded to drive responsibly on-site, especially when accessing and departing the site. Limits on truck numbers, namely for OOHW period, are identified in Table C1 and Table C2.
Non-tonal reversing alarms	Alternative reverse alarms, such as 'quackers' will be installed on all vehicles & mobile plant regularly used on site and on all vehicles & mobile plant required for OOHW.	This measure could be feasibly implemented.	Yes	- Sufficient noise reduction could be achieved at enough receivers. - Deemed to be cost effective. - Outweighs the identified social, economic, and environmental effects.	Yes	Yes	Project team will mandate use of non-tonal reversing alarms on equipment.
Building condition surveys	Undertake building dilapidation surveys on all buildings located within the minimum working distances established for cosmetic damage prior to commencement of activities with the potential to cause property damage (see Section 7.2.1). Vibration monitoring will be carried out during each phase of works in accordance with the CNVMP and in response to vibration complaints, further offers for building dilapidation surveys may be offered as a result of this monitoring.	This measure could be feasibly implemented.	Yes	Deemed to be cost effective. Outweighs the identified social, economic and environmental effects.	Yes	Yes	Buildings identified within the MWD for cosmetic damage will undergo building condition survey, to reduce the risk of cosmetic damage.

Control measure	Description of the control measure	Feasible mitigation test	Deemed feasible?	Reasonable mitigation test	Deemed reasonable?	Adopted?	Justification and commentary
Path mitigation measures							
Acoustic shed	An existing acoustic shed with sound insulation/absorption specifications designed by Renzo Tonin & Associates will be utilised on the site.	The site has been designed and constructed to include this.	Yes	- Potential benefit of at least 20 dB(A). - Insufficient noise reduction could be achieved at enough receivers. - Deemed to not be cost effective.	No	No	An acoustic shed will not provide significant noise reduction to enough receiver. Therefore, it will not be adopted.
Noise barriers or temporary noise screens	Erection of noise barriers around the perimeter of the site to shield sensitive receivers from noisy activities.	This measure is generally feasible, provided there is sufficient space to complete the works.	Yes, where there is sufficient space	- Potential benefit of 5-10 dB(A). - Insufficient noise reduction could be achieved at enough receivers. - Deemed to not be cost effective.	Yes	Yes	Noise barriers will be incorporated to provide noise reduction to receivers where deemed reasonable and feasible.
Enclosures	Temporary enclosures containing key stationary noise-generating activities and/or items such as generators. The enclosure may be incorporated into the plant design (e.g. generator housing) or built on site, such as an 'acoustic tent', i.e. a structure hung with temporary noise screens (e.g. Echo-barrier, FlexShield or similar).	This measure could be feasibly implemented. Limitations as per temporary noise screens above.	Yes	- Potential benefit of 10-20 dB(A). - Deemed to not be cost effective. - Utilisation of noise blankets with ATF fencing would be used as an appropriate alternative.	No	No	Enclosures will not be adopted but noise blankets with ATF fencing will be used as an appropriate alternative .
At-receiver							
At-property treatments	Design and installation of architectural treatments to sensitive receiver buildings to reduce internal noise levels to key rooms.	This measure could be feasibly implemented.	Yes	- Provides reduction for airborne noise only. - Does not mitigate GBN or vibration - Short term highly noise intrusive works or OOHW will be managed - Not cost effective.	No	No	The existing on-site mitigation is considered sufficient to manage noise impacts from this worksite.
Relocation of receivers during high impact works	Long term relocation of the occupants of identified properties be considered for highly GBN and vibration affected receivers adjacent to the western shaft.	This measure could be feasibly implemented.	Yes	- Deemed to not be cost effective. - Does not outweighs the identified social, economic and environmental effects.	No	No	No properties were identified to be highly GBN and vibration affected. Therefore, it will not be adopted.

Control measure	Description of the control measure	Feasible mitigation test	Deemed feasible?	Reasonable mitigation test	Deemed reasonable?	Adopted?	Justification and commentary
Noise management measures							
Site inductions & Toolbox Talks	All employees, contractors and subcontractors will receive a Project induction. The environmental component may be covered in toolboxes and should include (but is not limited to): •mitigation measures to be incorporated such as; no unnecessary shouting or use of horns, no loud radios or blue tooth speakers or the like, especially for OOH works • location of nearest sensitive receivers • relevant Project specific and standard noise and vibration mitigation measures; • permitted hours of work; • OOHW Procedure and Form • construction employee parking areas.	This measure could be feasibly implemented.	Yes	Routine task for Project team.	Yes	Yes	Inductions and toolbox talks will continue to be conducted for the Project.
Community consultation - disseminating information	Provide information to community of construction activity and potential impacts (see Section 9.2).	This measure could be feasibly implemented.	Yes	Routine task for Project team.	Yes	Yes	Updates will be distributed regularly for the duration of the project.
Community consultation - active communication with nearby sensitive receivers	Seek feedback from community to identify more sensitive times of the day, or particularly sensitive days (see Section 9.2). An example is identifying when student exams (such as Higher School Certificate exams, end of semester exams) will take place.	This measure could be feasibly implemented.	Yes	Routine task for Project team.	Yes	Yes	Project team shall proactively contact nearby sensitive receivers, particularly those which may have special requirements (e.g. recording studios).
Behavioural practices	Site teams will be receive a site induction and will attend a pre-start toolbox workshop. No swearing or unnecessary shouting or loud stereos/radios on site. No dropping of materials from height, throwing of metal items and slamming of doors.	This measure could be feasibly implemented.	Yes	Routine task for Project team.	Yes	Yes	Project team shall monitor site behaviour and advise supervisors if issues arise or additional behavioural practices are needed.
Noise monitoring	Noise monitoring to be conducted at key locations to quantify noise impacts at sensitive receivers, to verify that worker behaviour is appropriate and to determine that noise mitigation measures are appropriately effective.	This measure could be feasibly implemented.	Yes	Deemed to be cost effective. Outweighs the identified social, economic and environmental effects.	Yes	Yes	Noise monitoring shall be carried out as detailed in this assessment.
Update CNVIS	Regular updates of the CNVIS to account for changes in noise and vibration management strategies.	This measure could be feasibly implemented.	Yes	Can be reasonably undertaken by Project team where required.	Yes	Yes	Updates to the CNVIS will be carried out where required and will be reviewed regularly.

Control measure	Description of the control measure	Feasible mitigation test	Deemed feasible?	Reasonable mitigation test	Deemed reasonable?	Adopted?	Justification and commentary
Provision of respite evenings and nights	Where OOHW are required under CoA E42(c), such as works under ROL, respite evenings and nights will be provided in accordance with the CNVS. Where after all reasonable and feasible noise mitigation measures have been implemented there are still receivers noise affected during the OOHW period, works will be programmed to ensure that works and activities do not result in noise levels exceeding NMLs at the same noise sensitive receivers on more than: • 2 consecutive evenings and/or nights at any time; and • 3 evenings and/or nights per week; and • 10 evenings and/or nights per month. Furthermore, high noise impact works will be completed before 12:00 am (midnight) where reasonable and feasible.	This measure could be feasibly implemented and updated to reflect EPL conditions, if required.	Yes	Works would be able to be undertaken at night, with respite achieved at enough receivers on nights where works are not undertaken. Deemed to be cost effective. Outweighs the identified social, economic, and environmental effects.	Yes	Yes	Works will be planned to minimise consecutive nights of works affecting the same sensitive receiver.
Respite coordination	Consult with proponents of other construction works in the vicinity of the worksite and take reasonable steps to coordinate works to minimise cumulative impacts of noise and vibration and maximise respite for affected sensitive receivers (e.g. aligning respite evenings).	This measure could be feasibly implemented, if required.	Yes	Sufficient noise reduction could be achieved at enough receivers. Deemed to be cost effective. Outweighs the identified social, economic and environmental effects.	Yes	Yes	Respite coordination shall be conducted with neighbouring projects.
Implement additional management measures	Identify and implement additional management measures outlined in this assessment.	This measure could be feasibly implemented.	Yes	Consistency with CNVS	Yes	Yes	Additional management measures to be identified on a case-by-case basis and with consideration of the standard mitigation and management measures outlined in this report.

9.4 Additional management measures

Section 5 of the Transport for NSW (TfNSW) Construction Noise and Vibration Strategy (CNVS) directs that in instances where, after the application of all reasonable and feasible mitigation and management measures (refer to Section 9.3), the $L_{Aeq(15minute)}$ airborne construction noise and/ or $L_{Aeq(15minute)}$ ground-borne noise levels are still predicted to exceed the relevant NMLs, or if vibration monitoring at representative locations still exceeds relevant vibration objectives for human annoyance, additional management measures can be applied to further limit the risk of annoyance from construction noise and vibration. The CNVS suggests the Project should consider implementing additional management measures such as:

- **Alternative accommodation** (**AA**) options may be provided for residents living close to construction works that are likely to incur unreasonably high impacts over an extended period of time (more than 2 consecutive days). Alternative accommodation will be determined on a case-by-case basis.
- **Monitoring** (**M**) of noise or vibration may be conducted at the affected receiver(s) or a nominated representative location where it has been identified that specific construction activities are likely to exceed the relevant noise or vibration objectives. Monitoring can be in the form of either unattended logging or operator attended surveys. The purpose of monitoring is to inform the relevant personnel when the noise or vibration goal has been exceeded so that additional management measures may be implemented.
- **Individual briefings** (**IB**) are used to inform stakeholders about the impacts of high noise activities and mitigation and management measures that will be implemented. Communications representatives from the contractor would visit identified stakeholders at least 48 hours ahead of potentially disturbing construction activities. Individual briefings provide affected stakeholders with personalised contact and tailored advice, with the opportunity to comment on the Project.
- **Letter box drops** (**LB**) in the form of a newsletter produced and distributed to the local community via letterbox drop or email via the Project mailing list. The newsletter will provide an overview of current and upcoming works across the Project and other topics of interest. The objective is to engage, inform and provide Project-specific messages. Advanced warning of potential disruptions (e.g. traffic changes or noisy works) can assist in reducing the impact on the community.
- **Project specific respite offers** (**RO**) provide residents subjected to lengthy periods of noise or vibration respite from an ongoing impact.
- **Phone calls and emails** (**PC**) detailing relevant information about construction works would be made to identified noise or vibration affected stakeholders within 7 days of proposed work to provide tailored advice and the opportunity for stakeholders to provide comments on the proposed work and specific needs etc.
- **Specific notifications** (**SN**) would be letterbox dropped or hand distributed to identified stakeholders no later than 7 days ahead of construction activities that are likely to exceed the

noise objectives. This form of communication is used to support periodic notifications, or to advertise unscheduled works.

In addition, all potentially impacted receivers will be kept informed of the nature of works to be carried out, the expected noise levels and duration, as well as be given appropriate enquiries and complaints contact details.

9.4.1 Additional airborne noise management measures

The steps to be carried out to determine the additional airborne noise management measures to be implemented are identified in Figure 10.

Figure 10: Additional airborne noise management measures

Construction hours	Receiver perception	dB(A) above RBL*	dB(A) above ANML	Additional management measures
Standard Hours Monday-Friday (7am-6pm) Saturday (8am-1pm)	Noticeable	5 to 10	0	-
	Clearly Audible	> 10 to 20	< 10	-
	Moderately intrusive	> 20 to 30	> 10 to 20	PN, V
	Highly intrusive	> 30	> 20	PN, V
	75dBA or greater	N/A	N/A	PN, V, SN
OOHW Period 1 Monday-Friday 6pm-10pm Saturday (7am-8am, 1pm-10pm) Sunday/PH (8am-6pm)	Noticeable	5 to 10	< 5	-
	Clearly Audible	> 10 to 20	5 to 15	PN
	Moderately intrusive	> 20 to 30	> 15 to 25	PN, V, SN, RO
	Highly intrusive	> 30	> 25	PN, V, SN, RO, RP#, DR#
OOHW Period 2 Monday-Saturday (12am-7am, 10pm-12am) Sunday/PH (12am-8am, 6pm-12am)	Noticeable	0 to 10	< 5	PN
	Clearly Audible	> 10 to 20	5 to 15	PN, V
	Moderately intrusive	> 20 to 30	> 15 to 25	PN, V, SN, RP, DR
	Highly intrusive	> 30	> 25	PN, V, SN, AA, RP, DR

Notes: PN = Project notification; V = Verification monitoring; RP = Respite Period; AA = Alternative accommodation; SN = Specific notification, individual briefings, or phone call; DR = Duration Reduction; RO = Project specific respite offer

* SWLs used for the purpose of estimating noise impact shall be increased by 5dBA where works will include: power saws for the cutting of timber, masonry & steel; grinding of metal, concrete or masonry; rock/line drilling; bitumen milling & profiling; jack hammering, rock hammering & rock breaking; or impact piling as a correction factor for noise with special audible characteristics. It is noted that this correction factor is automatically calculated under Step 2 of the Construction Noise Estimator Tool (see APPENDIX E).

Respite periods and duration reduction are not applicable when works are carried out during OOHW Period 1 Day only (i.e. Saturday 6am-7am & 1pm-6pm, Sundays / Public Holidays 8am-6pm)

Figure 10 presents a summary of the additional management measures applicable for construction activities where, after application of all reasonable and feasible mitigation options, construction noise levels are still above the NMLs.

Prior to the commencement of works, receivers identified in APPENDIX D.3 will be notified to advise that noise from the works may at times be audible. Additional airborne noise management measures will be implemented as per Table D.3.

9.4.2 Additional ground-borne noise management measures

The steps to be carried out to determine the additional ground-borne noise management measures to be implemented are identified in Figure 10.

Figure 11: Additional ground-borne noise management measures

Construction hours	Receiver perception	dB(A) above GNML	Additional management measures
Standard Hours Monday-Friday (7am-6pm) Saturday (8am-1pm)	Clearly Audible	< 10	PN
	Moderately intrusive	> 10 to 20	PN
	Highly intrusive	> 20	PN, V, SN
OOHW Period 1 Monday-Friday 6pm-10pm Saturday (7am-8am, 1pm-10pm) Sunday/PH (8am-6pm)	Clearly Audible	< 10	PN
	Moderately intrusive	> 10 to 20	PN, V, RO, SN
	Highly intrusive	> 20	PN, V, SN, RO, RP#, DR#
OOHW Period 2 Monday-Saturday (12am-7am, 10pm-12am) Sunday/PH (12am-8am, 6pm-12am)	Clearly Audible	< 10	PN, V, SN
	Moderately intrusive	> 10 to 20	PN, V, SN, AA, RP, DR
	Highly intrusive	> 20	PN, V, SN, AA, RP, DR

Notes: PN = Project notification
V = Verification of monitoring
RP = Respite Period
DR = Duration Reduction
AA = Alternative accommodation
SN = Specific notification, individual briefings, or phone call
RO = Project specific respite offer

Respite periods and duration reduction are not applicable when works are carried out during OOHW Period 1 Day only (i.e. Saturday 6am-7am & 1pm-6pm, Sundays / Public Holidays 8am-6pm)

9.4.3 Additional vibration management measures

If vibration monitoring at representative locations still exceeds relevant vibration objectives for human annoyance, the appropriate additional management measures [1], are presented in Figure 12, should be provided.

Figure 12: Additional vibration management measures

Construction hours	Receiver perception	above VML	Additional management measures
Standard Hours Monday-Friday (7am-6pm) Saturday (8am-1pm)	Human disturbance	> HVML	PN, V, RO
	Building damage	> DVML	V, AC
OOHW Period 1 Monday-Friday (6pm-10pm) Saturday (7am-8am, 1pm-10pm) Sunday/PH (8am-6pm)	Human disturbance	> HVML	PN, V, SN, RO, RP, DR
	Building damage	> DVML	V, AC
OOHW Period 2 Monday-Saturday (12am-7am, 10pm-12am) Sunday/PH (12am-8am, 6pm-12am	Human disturbance	> HVML	PN, V, SN, RO, AA, RP, DR
	Building damage	> DVML	V, AC

Notes: PN = Project notification; V = Verification of monitoring; DR = Duration Reduction; RP = Respite Period; SN = Specific notification, individual briefings, or phone call; AA = Alternative accommodation; RO = Project specific respite offer; AC = Alternative construction methodology

HVML: vibration management level for human disturbance

DVML: vibration management level for cosmetic damage to buildings or structures

9.5 Managing site specific activities and cumulative noise impacts

9.5.1 Construction noise and vibration management tool (Gatewave)

This CNVIS has established the overall impacts associated with the proposed works. A 3D construction noise and vibration management tool (Gatewave, www.gatewave.com.au) has been developed specifically for the Project to allow specific work areas and activities to be assessed as construction works progress. It also allows cumulative noise impact from other aspects of the Project or, where

relevant noise from other construction projects, to be assessed and managed in accordance with relevant conditions of approval.

Gatewave will be used regularly to plan, assess and manage works progressively.

Gatewave incorporates ground elevation contours, building heights, the built environment and atmospheric conditions to predict construction noise in accordance with the International Standard ISO 9613-2:1996 implementing quality standard ISO 17534-1:2015. All sensitive receivers identified by the land use survey are integrated into the Gatewave tool.

9.6 Real-time and attended noise monitoring

Noise and vibration monitoring shall follow the procedures outlined in the CNVMP. Note that monitoring at properties may be undertaken from the property boundary to limit any inconvenience to property owners. Monitoring should be undertaken at a minimum of two of the most affected locations nominated in Table 9.2.

9.6.1 Airborne noise

Attended noise monitoring is to be undertaken to verify that noise levels resulting from construction works are in accordance with the levels predicted in this report, subject to obtaining the property owner/occupier's consent to access the property (where required). Noise monitoring will be completed in publicly accessible areas on or near the nominated receivers, typically at ground floor level. Where, following community consultation, specific sensitive receivers are identified for additional monitoring, access to the property will be sought through the Stakeholder and Community Relations team.

In accordance with the CNVMP, the locations in Table 9.2 are nominated for verification noise monitoring, subject to safety and site constraints.

Table 9.2: Nominated noise verification monitoring locations

Type of monitoring	NCA/ Receiver type	Nominated receiver address
Attended	NCA T1	146B CLIFTON AVENUE, KEMPS CREEK, NSW
Attended	NCA T2	1783-1789 ELIZABETH DRIVE, BADGERYS CREEK, NSW
Attended	NCA T3	1953-2109 ELIZABETH DRIVE, BADGERYS CREEK, NSW
Attended	NCA T4	121 WILLMINGTON ROAD, LUDDENHAM, NSW
Attended	NCA T5	380 PARK ROAD, LUDDENHAM, NSW
Attended	NCA T6	24 GREENDALE ROAD, WALLACIA, NSW
Attended	NCA T7	9 DONOHOES AVENUE, MULGOA, NSW
Attended	NCA T8	2720 SILVERDALE ROAD, WALLACIA, NSW
Attended	NCA T9	2600 SILVERDALE ROAD, WALLACIA, NSW
Attended	NCA B1	1770 ELIZABETH DRIVE, KEMPS CREEK, NSW
Attended	NCA B2	175 CROSS STREET, KEMPS CREEK, NSW
Attended	NCA B3	1560 ELIZABETH DRIVE, CECIL PARK, NSW

Type of monitoring	NCA/ Receiver type	Nominated receiver address
Attended	NCA B4	31 STIRLING STREET, CECIL HILLS, NSW
Attended	NCA B5	109 FEODORE DRIVE, ELIZABETH HILLS, NSW
Attended	NCA B6	170 NORTH LIVERPOOL ROAD, GREEN VALLEY, NSW
Attended	NCA B7	102 MONTGOMERY ROAD, BONNYRIGG, NSW
Attended	NCA B8	11 HEBBLEWHITE PLACE, BONNYRIGG, NSW
Attended	NCA B9	1 KATINKA STREET, BONNYRIGG, NSW
Attended	NCA B10	2 MEADOWS ROAD, CABRAMATTA WEST, NSW
Attended	NCA B11	62 WATER STREET, CABRAMATTA WEST, NSW
Attended	NCA B12	19 COVENTRY ROAD, CABRAMATTA, NSW
Attended	NCA B13	18/25, BARTLEY STREET, CANLEY VALE NSW 2166
Attended	NCA B14	6 CURTIN STREET, CABRAMATTA, NSW
Attended	NCA B15	1 CHANCERY STREET, CANLEY VALE, NSW
Attended	NCA B16	47 WILLOWBANK CRESCENT, CANLEY VALE, NSW
Attended	NCA B17	7 HENRY LAWSON DRIVE, LANSDOWNE, NSW
Attended	NCA B18	2A KNIGHT STREET, LANSVALE, NSW

Note: To be confirmed subject to suitability of location and agreement from property owner.

APPENDIX D.3 identifies the activities where monitoring should be carried out for each NCA and additional locations, should any of the above monitoring locations be unsuitable.

9.6.2 Vibration monitoring

Attended vibration monitoring is to be conducted to verify and, if required, update the minimum working distances in Table 7.2. Vibration monitoring shall be conducted in accordance with the CNVMP, with careful consideration given to the receivers listed in Table 9.3. Note that the vibration monitoring locations listed in Table 9.3 can change depending on the actual work area relative to sensitive receivers. The Gatewave 3D construction noise and vibration management tool (refer Section 9.5.1) will allow specific vibration intensive work areas to be assessed and will identify sensitive receivers that require vibration monitoring.

Vibration monitoring will be completed in publicly accessible areas on or near the nominated receivers, typically at ground floor level. Where, following community consultation, specific sensitive receivers are identified for additional monitoring, access to the property will be sought through the Stakeholder and Community Relations team.

Table 9.3: Nominated vibration verification monitoring locations

NCA	Nominated receiver address
NCA B6	170 NORTH LIVERPOOL ROAD, GREEN VALLEY
NCA B6	168 NORTH LIVERPOOL ROAD, GREEN VALLEY
NCA B8	11 HEBBLEWHITE PLACE, BONNYRIGG
NCA B9	654-658 CABRAMATTA ROAD, BONNYRIGG

NCA	Nominated receiver address
NCA B9	1 KATINKA STREET, BONNYRIGG
NCA B9	2 KATINKA STREET, BONNYRIGG
NCA B9	4 KATINKA STREET, BONNYRIGG
NCA B10	48 EDENSOR ROAD, CABRAMATTA WEST
NCA B10	2 MEADOWS ROAD, CABRAMATTA WEST
NCA B10	600-602 CABRAMATTA ROAD, MOUNT PRITCHARD
NCA B13	1 BARTLEY STREET, CANLEY VALE
NCA B13	25 ST JOHNS ROAD, CANLEY HEIGHTS
NCA B14	6 CURTIN STREET, CABRAMATTA
NCA B16	55 WILLOWBANK CRESCENT, CANLEY VALE
NCA B16	29 LANSDOWNE ROAD, CANLEY VALE
NCA B16	53 WILLOWBANK CRESCENT, CANLEY VALE
NCA B16	12 BROMLEY STREET, CANLEY VALE
NCA B16	47 WILLOWBANK CRESCENT, CANLEY VALE
NCA B16	29 LANSDOWNE ROAD, CANLEY VALE
NCA T3	2241-2253 ELIZABETH DRIVE, LUDDENHAM
NCA T6	24 GREENDALE ROAD, WALLACIA

Note: Both attended and unattended monitoring to be confirmed subject to suitability of location and access constraints (such as property owner consent).

9.6.3 Complaints handling

All noise and vibration related complaints received and responded to will be managed in accordance with the CEMP and the Community Communication Strategy prepared under Condition B2. Each complaint shall be investigated and where noise and/or vibration levels are established as exceeding the set limits, appropriate amelioration measures shall be put in place to mitigate future occurrences. Management measures may include modification of construction methods such as using smaller equipment and establishment of minimum working distances as mentioned above and/or use of additional temporary screening, these mitigation measures will be implemented in consultation with the complainant.

Sydney Water operate a construction complaints line between 8am to 5:30pm Monday to Friday. Enquiries/ complaints may also be received through their site (https://www.sydneywater.com.au/contact-us/email-us.html?form-type=something-else&todo=complaint) or through the complaints hotline (13 20 92).

10 Conclusion

Construction works associated with the USC AWRC have been described in this CNVIS to identify potential environmental risks associated with construction noise and vibration. Construction noise and vibration objectives have been established consistent with the Conditions of Approval for the Project and the EIS.

Construction airborne noise

During site compound activities the predicted noise levels indicate the nearest sensitive receivers will be construction noise affected during standard construction hours and outside standard construction hours. The closest receivers may be highly noise affected when the construction works are close to the receiver.

During pipeline installation activities the predicted noise levels indicate the nearest sensitive receivers will be construction noise affected during standard construction hours. The closest receivers may be highly noise affected when the construction works are close to the receiver. The nearest residential receivers are likely to be construction noise affected by the OOH civil works in the absence of additional mitigation measures and controls. The works are linear and will progress relatively quickly. Once the work progresses to the next stage, receivers will no longer be construction noise affected.

During pipeline installation activities, out-of-hours works will only occur as permitted under the planning approval and or in accordance with the Project's Out of Hours Works Protocol [2] or under the Environment Protection Licence (EPL) number 21800 for works subject to an EPL.

Noise mitigation and management measures, including noise monitoring requirements, have been presented in Section 9 to aid in providing additional noise reduction benefits where noise levels are above the NMLs. This includes the implementation of Gatewave 3D construction noise and vibration management tool, which will allow specific work areas and activities to be assessed in detail as construction works progress. It will also allow cumulative noise impact from other aspects of the Project or, where relevant noise from other construction projects, to be assessed and managed in accordance with relevant conditions of approval.

Construction ground-borne noise

During the pipeline installation works, airborne noise is expected to be much higher than ground-borne noise generated by the works, with the exception of two receivers in close proximity (approximately 1m) to rockhammering for trench excavation. Potential ground-borne noise impacts are unlikely to change the mitigation response required to address concurrent airborne noise impacts.

Construction vibration

During the pipeline installation works 40 vibration-sensitive receivers have been identified as within the recommended minimum working distance for cosmetic damage. Residential receivers located adjacent to the pipeline alignment have been identified as within the recommended minimum working distance for human annoyance.

Vibration mitigation and management measures have been presented in Section 9 to reduce the risk of damage to buildings near the worksite and to manage annoyance from construction vibration. Vibration impacts will be progressively assessed in detail using Gatewave 3D construction noise and vibration management tool to ensure the risk of damage or annoyance from vibration can be managed appropriately.

Construction traffic

The predicted noise impacts are assessed as low and generally within the minimum requirements in the CNVS.

APPENDIX A Glossary of terminology

The following is a brief description of the technical terms used to describe noise to assist in understanding the technical issues presented.

Note – SSI approval includes definitions of specific terms

ABN	Airborne Noise
Adverse weather	Weather effects that enhance noise (that is, wind and temperature inversions) that occur at a site for a significant period of time (that is, wind occurring more than 30% of the time in any assessment period in any season and/or temperature inversions occurring more than 30% of the nights in winter).
Ambient noise	The all-encompassing noise associated within a given environment at a given time, usually composed of sound from all sources near and far.
Assessment period	The period in a day over which assessments are made.
Assessment point	A point at which noise measurements are taken or estimated. A point at which noise measurements are taken or estimated.
Attenuation	The reduction in the level of sound or vibration.
AVTG	Assessing Vibration – a technical guideline (DEC 2006)
Background noise	Background noise is the term used to describe the underlying level of noise present in the ambient noise, measured in the absence of the noise under investigation, when extraneous noise is removed. It is described as the average of the minimum noise levels measured on a sound level meter and is measured statistically as the A-weighted noise level exceeded for ninety percent of a sample period. This is represented as the L90 noise level (see below).
CEMP	Construction Environmental Management Plan
CNVIS	Construction Noise and Vibration Impact Statement
CNVS	Construction Noise and Vibration Standard (Transport for NSW 2018)
CoA	Condition of Approval (SSI 8609189)
Condition	Condition of Approval (SSI 8609189)
Decibel [dB]	The units that sound is measured in. The following are examples of the decibel readings of every day sounds: 0dB The faintest sound we can hear 30dB A quiet library or in a quiet location in the country 45dB Typical office space. Ambience in the city at night 60dB CBD mall at lunch time 70dB The sound of a car passing on the street 80dB Loud music played at home 90dB The sound of a truck passing on the street 100dB The sound of a rock band 115dB Limit of sound permitted in industry 120dB Deafening
dB(A)	A-weighted decibels. The A- weighting noise filter simulates the response of the human ear at relatively low levels, where the ear is not as effective in hearing low frequency sounds as it is in hearing high frequency sounds. That is, low frequency sounds of the same dB level are not heard as loud as high frequency sounds. The sound level meter replicates the human response of the ear by using an electronic filter which is called the "A" filter. A sound level measured with this filter switched on is denoted as dB(A). Practically all noise is measured using the A filter.

dB(C)	C-weighted decibels. The C-weighting noise filter simulates the response of the human ear at relatively high levels, where the human ear is nearly equally effective at hearing from mid-low frequency (63Hz) to mid-high frequency (4kHz), but is less effective outside these frequencies.
DEC	Department of Environment and Conservation (now EPA)
DECC	Department of Environment and Climate Change (now EPA)
DECCW	Department of Environment, Climate Change and Water (now EPA)
DP&E	NSW Department of Planning and Environment
ECRTN	Environmental Criteria for Road Traffic Noise (EPA 1999)
EIS	Environmental Impacts Statement
EPA	NSW Environment Protection Authority
Feasible and reasonable	Consideration of best practice taking into account the benefit of proposed measures and their technological and associated operational application in the NSW and Australian context. Feasible relates to engineering considerations and what is practical to build. Reasonable relates to the application of judgement in arriving at a decision, taking into account mitigation benefits and cost of mitigation versus benefits provided, community views and nature and extent of potential improvements.
Frequency	Frequency is synonymous to pitch. Sounds have a pitch which is peculiar to the nature of the sound generator. For example, the sound of a tiny bell has a high pitch and the sound of a bass drum has a low pitch. Frequency or pitch can be measured on a scale in units of Hertz or Hz.
GBN	Ground-borne noise
GIS	Geographic Information System
ICNG	Interim Construction Noise Guideline (DECC, 2009)
INP	NSW Industrial Noise Policy (EPA, 2000)
L_{Max}	The maximum sound pressure level measured over a given period.
L_{Min}	The minimum sound pressure level measured over a given period.
L_1	The sound pressure level that is exceeded for 1% of the time for which the given sound is measured.
L_{10}	The sound pressure level that is exceeded for 10% of the time for which the given sound is measured.
L_{90}	The level of noise exceeded for 90% of the time. The bottom 10% of the sample is the L90 noise level expressed in units of dB(A).
L_{eq}	The "equivalent noise level" is the summation of noise events and integrated over a selected period of time.
MWD	Minimum Working Distance
NCA	Noise Catchment Area
NML	Noise management level
NPfI	Noise Policy for Industry
NSR	Noise Sensitive Receiver
OEH	Office of Environment and Heritage
OOHW	Out-of-Hours Works – work completed outside of standard construction hours
OSR	Other Sensitive Receiver
PPV	Peak Particle Velocity
RBL	The Rating Background Level for each period is the medium value of the ABL values for the period over all of the days measured. There is therefore an RBL value for each period (day, evening and night)
Reflection	Sound wave changed in direction of propagation due to a solid object obscuring its path.

EMM	Environmental Mitigation Measure
RNP	NSW Road Noise Policy (DECCW 2011)
ROL	Road Occupancy Licence
SEL	Sound Exposure Level (SEL) is the constant sound level which, if maintained for a period of 1 second would have the same acoustic energy as the measured noise event. SEL noise measurements are useful as they can be converted to obtain Leq sound levels over any period of time and can be used for predicting noise at various locations.
Sound	A fluctuation of air pressure which is propagated as a wave through air.
Sound absorption	The ability of a material to absorb sound energy through its conversion into thermal energy.
Sound level meter	An instrument consisting of a microphone, amplifier and indicating device, having a declared performance and designed to measure sound pressure levels.
Sound pressure level (SPL)	The level of noise, usually expressed in decibels, as measured by a standard sound level meter with a microphone.
Sound power level (SWL)	Ten times the logarithm to the base 10 of the ratio of the sound power of the source to the reference sound power.
SSI	State Significant Infrastructure
Standard construction hours	Hours during which construction work is permitted by the conditions of approval and the EPL.

APPENDIX D Construction airborne noise impacts

D.1 Predicted noise levels

The detailed predicted levels have been provided to John Holland in a spreadsheet table to more adequately mitigate and manage potential noise impacts.

Predicted construction noise levels **Site Compounds**

Receiver		Predicted noise levels, dB(A)																	
		Day (Standard)			Day (OOHW)			Evening (OOHW)			Night (OOHW)			Sleep screening			Sleep limit

D.2 Number of receivers above NMLs

The number of exceedances has been provided to John Holland in a spreadsheet table.

Table D.2: Number of exceedances per NCA **Pipelines**

NCA	Day (Standard)							Day (OOHW)							Evening (OOHW)						Night (OOHW)						Lmax (screening)						Lmax (limit)					
	dB(A) above NML	Number of exceedances						dB(A) above NML	Number of exceedances						dB(A) above NML	Number of exceedances					dB(A) above NML	Number of exceedances					dB(A) above NML	Number of exceedances					dB(A) above NML	Number of exceedances

D.3 Additional management measures

The additional management measures have been provided to John Holland in a spreadsheet table to more adequately mitigate and manage potential noise impacts.

Table D.3: Additional noise mitigation and receiver notifications **Pipelines**

Receiver		Additional noise mitigation and receiver notifications

APPENDIX F Community Consultation to Identify Additional Mitigation Measures

31 July 2023

Dear Resident

Re: Start of Major Work on Pipeline Construction for Upper South Creek Advanced Water Recycling Centre

Sydney Water is building the Upper South Creek Advanced Water Recycling Centre (AWRC) in Kemps Creek and associated pipelines to support population and economic growth in Western Sydney.

Our delivery partner, John Holland, will start major work from around **Monday 7 August 2023** constructing the treated water pipeline from Kemps Creek to the Nepean River at Wallacia and the brine line from Kemps Creek to an existing wastewater network at Lansdowne. The pipelines will be built underground, mostly in road reserves and public spaces. Some sections of pipeline will need to be installed across private properties.

The table below provides an overview of our work for the next three months. Detailed information will be provided to each street as the pipeline crews progress through each suburb, including any local traffic changes.

Our working hours
Our standard working hours are **7 am to 6 pm Monday to Friday** and **8 am to 1 pm Saturday.** From time to time, we will work at night to maintain safety for road users and workers and to keep people moving during peak travelling times. If you are directly affected, we will notify you before this occurs.

Three-month look ahead of work

LOCATIONS	ACTIVITY
WALLACIA	
Fowler Reserve off Silverdale Road	• Remove trees and vegetation • Establish temporary construction compound • Install worker amenities • Deliver pipes and materials • Establish material stockpiles
Silverdale Road	• Establish temporary construction compound on private land
LUDDENHAM AND BADGERYS CREEK	
Park Road between Elizabeth Drive and Driver Avenue	• Remove trees and vegetation • Potholing for utility investigations • Install temporary fencing • Establish temporary construction compounds • Build temporary access tracks on private land • Deliver pipes and materials • Excavation and installation of pipeline
The Northern Road (Willmington Road) between Park Road and Elizabeth Drive	• Remove trees and vegetation • Potholing for utility investigations • Install temporary fencing • Deliver pipes and materials • Excavation and installation of pipeline

LOCATIONS	ACTIVITY
LUDDENHAM AND BADGERYS CREEK CONTINUED	
Elizabeth Drive between The Northern Road and Badgerys Creek Drive	• Remove trees and vegetation • Potholing for utility investigations • Install temporary fencing • Establish temporary construction compounds on private land • Build a temporary access track on private land • Deliver pipes and materials • Excavation and installation of pipeline
KEMPS CREEK	
Elizabeth Drive between Badgerys Creek Road and Western Road	• Remove trees and vegetation • Potholing for utility investigations • Install temporary fencing • Deliver pipes and materials • Excavation and installation of pipeline
Kemps Creek area (through private properties)	• Remove trees and vegetation • Potholing for utility investigations • Install temporary fencing • Establish temporary construction compounds • Build temporary access tracks • Deliver pipes and materials • Excavation and installation of pipeline • Excavation of pits for specialist drilling equipment • Installation of a pipeline beneath Elizabeth Drive at the intersection of Western Road, using a horizontal directional drilling machine
Western Road between Elizabeth Drive and Cross Street	• Potholing for utility investigations
Cross Street between Western Road and Kemps Creek (near Pratten Street)	• Potholing for utility investigations
CECIL PARK	
Range Road	• Potholing for utility investigations
Western Sydney Parklands	• Remove trees and vegetation • Potholing for utility investigations • Establish temporary construction compound • Install worker amenities • Deliver pipes and materials • Excavation of pits for specialist drilling equipment • Installation of a pipeline beneath the Upper Canal heritage structure and a high-pressure gas pipeline using a horizontal directional drilling machine
CECIL HILLS	
Kensington Close	• Potholing for utility investigations • Install temporary fencing • Deliver pipes and materials • Excavation and installation of pipeline
Stirling Street between Kensington Close and Newgate Boulevarde	• Potholing for utility investigations • Install temporary fencing • Deliver pipes and materials • Excavation and installation of pipeline

LOCATIONS	ACTIVITY
CECIL HILLS CONTINUED	
Feodore Drive between Newgate Boulevarde and Spencer Road	• Potholing for utility investigations • Install temporary fencing • Deliver pipes and materials • Excavation and installation of pipeline
Cecil Hills Reservoir off Cowpasture Road	• Establish temporary construction compound • Minor earthworks and minor road works • Deliver pipes, materials and equipment • Establish material stockpiles
BONNYRIGG	
Upton Place	• Establish temporary construction compound in the reserve at the corner of Elizabeth Drive and Bonnyrigg Avenue • Minor earthworks and construction of a temporary access road off Upton Place • Install worker amenities • Deliver pipes and materials
FAIRFIELD HEIGHTS	
East Parade	• Establish temporary construction compound inside Sydney Water treatment plant • Install worker amenities • Minor earthworks and construction of access tracks • Deliver pipes, materials and equipment • Establish material stockpiles
CABRAMATTA	
Cabravale Leisure Centre car park	• Establish temporary construction compound • Deliver pipes, materials and equipment • Storage of materials and equipment • Install worker amenities • Establish launch pit for drilling machine • HDD beneath crossing beneath railway line

LANSDOWNE	
Lansdowne Reserve	• Remove trees and vegetation • Potholing for utility investigations • Establish a temporary construction compound • Establish material stockpiles • Build a temporary access from Henry Lawson Drive

Traffic changes
There will be increased heavy vehicle movements on local roads as the work progresses. Some on-street parking spaces may be temporarily unavailable and we wrote to the community in early July to explain where this would occur. Partial lane closures and speed reductions will also be in place to ensure the workzone is safe.

Our work impacts
We will minimise impacts as much as possible through active monitoring of noise, dust and vibration, our selection of machinery, considering the hours we conduct our high impact activities and training and supervision of our workforce.

Whilst we will have a number of measures in place to manage noise, dust and vibration, we are always open to feedback about how we can further reduce the impact on you. We would also like to know if there are activities that happen at your address that may be significantly disrupted by our work. To view a full list of our planned measures and provide your thoughts about our approach, please complete a feedback form by scanning the below QR code on your phone.

SCAN ME

Regular updates will be distributed to the community as the work progresses, with properties that may be highly impacted by noise or vibration or planned night works to receive specific notifications about these activities.

For further information please contact John Holland's Community Team on 1800 064 127 or uppersouthcreek@sydneywater.com.au. To view a map showing our work locations or to find out more information about the Upper South Creek Advanced Water Recycling Centre project, visit sydneywatertalk.com.au/uppersouthcreek.

Thanks for your understanding during this essential work.

Yours sincerely

Darren Wharton
