21 July 2026

Extended work hours – intersection of Hornby Street and Broughton Street, Wilton

Thank you for your patience as Sydney Water builds new water, wastewater, and recycled water infrastructure, to service growing communities in the Wilton area.

Part of this work has seen, Sydney Water's contractor, Athassel Civil, construct new drinking water and recycled water pipelines along Argyle, Almond and Hornby Streets in Wilton. They also constructed a Pressure Release Valve (PRV) chamber for the pipeline connections near the intersection of Hornby Street and Broughton Street, Wilton.

For this next phase of this work, the connections and valves in the PRV chamber will be completed and tested. This work will involve:

- setting up a temporary overnight work site, including lighting and construction equipment
- using machinery to excavate around the work site, including rock breaking where required
- connecting and testing the new water infrastructure
- removing equipment and cleaning up the work site.

To help reduce impacts to your water supply, we will work extended hours and during the night from 1.00pm Saturday 25 July to 6.00pm Sunday 26 July 2026.

In the event of heavy rainfall, we may not be able to complete this work. If this occurs, we will contact you again with updated details before this work is rescheduled.

This is the final stages of this package of work. Once finished, the area will be restored and replanted to meet council and environmental requirements.

Minimising our impact on you

We understand extended work hours can be disruptive and are committed to minimising impacts of our activities on the local community. We will make every effort to minimise disturbance our work may have on you by:

- limiting our higher-noise activities to standard daytime working hours where possible
- directing lighting towards the work site and away from nearby homes
- positioning machinery away from residential properties where possible
- not running motors and equipment unnecessarily
- using traffic and pedestrian management controls to maintain safety and traffic flow around the work area.

Appropriate safety and environmental controls will be in place at all times. This work will not interrupt your water supply, however you may experience low water pressure during the work.
